Full product description

Durable housing and powerful battery

Xiaomi Mijia MJDDLSD001QW electric screwdriver has a stylish and fairly durable housing made of ABS and polyamide. What is convenient is that it is cordless. The screwdriver is powered by a built-in 2000mAh battery.

Powerful motor with high torque

A DC motor with strong magnets and a metal gearbox generates a **stable torque of 5 Nm**, ideal for assembling furniture, electronics, and even DIY projects.

Long cordless runtime

The built-in 2000 mAh battery can drive out around 180 screws on a full charge. **The USB-C port** allows for fast charging and work without a tangle of cables. In addition, the battery compartment is made of flame-retardant materials that protect the user from heat and other hazards.

One-piece patented design

There are no fixing screws on the body of the **Mijia electric screwdriver**. All elements are moulded from **high-quality** plastic and joined into an innovative design, which is then coated with two layers of hot-drying lacquer to create a pleasant-to-the-touch texture. The screwdriver **does not slip in the hand**, does not collect dirt and is not prone to corrosion.

12 solid steel bits with an additional extension

The set of **12 bits** for the Mijia screwdriver is made of **top-quality S2 steel** with the highest precision. They have also been hardened to a degree that ensures hardness without cracking and resilience without softness. Thanks to the **60 mm extension**, the screwdriver can be used in narrow and hard-to-reach places across a wide range of applications.

Complete accessory set

The bits and extension are in a separate box. The Type-C cable and the screwdriver itself are placed in a handy case, which lets you quickly grab the right item and get to work.
