Information:

Extralink LAD44ST is a telescopic aluminium ladder with a length of up to 4,4 m, designed for home, garden, installation and workshop work. 15 rungs spaced at 30 cm intervals allow the height to be conveniently adjusted to the task, and the maximum load of 150 kg provides solid support during use. The lightweight design weighs 11,8 kg, and when folded it is only 93 cm high, making transport and storage easier. The model is equipped with a securing strap and non-slip feet for greater convenience and stability.

Full product description

Work at height

Extralink LAD44ST is a telescopic aluminium ladder that reaches a length of 4.4 m when fully extended. It enables various tasks inside and outside buildings, such as gutter cleaning, façade maintenance, lighting installation or general cleaning work. The maximum permitted load of the structure is 150 kg.

Telescopic adjustment

The telescopic extension system allows the ladder length to be adjusted to the task at hand. The LAD44ST model has 15 rungs spaced at 30 cm intervals. The design is suitable, among other things, for accessing lofts, higher shelves and other hard-to-reach places.

Aluminium construction

The ladder is made of aluminium, which combines durability with relatively low weight. The model weighs 11.8 kg, making it easy to carry between work sites. The telescopic design means that one ladder can be used for household, garden, installation and workshop tasks.

Convenient transport

When folded, the ladder is 93 cm high, which makes it easy to transport in a car boot. Its compact form is useful for installers, renovation teams and users who carry out work in different locations. The folded ladder can be conveniently carried together with other tools.

Compact folding

The telescopic design reduces the amount of space needed to store the ladder. After work is finished, the LAD44ST model can be placed in a garage, workshop, storage cupboard or utility room. The folded height of 93 cm means the ladder does not require the storage space needed for a traditional 4.4 m ladder.

Safety strap

The integrated strap helps keep the ladder sections together during carrying and storage. Anti-slip feet help ensure the structure is stable on a suitable surface. Before starting work, the ladder should be properly extended, the section locks checked and it should be used in accordance with the supplied instructions.
