Full product description

Winner of the Japanese "Good Design Award" in 2017.

The **Xiaomi Mi Laser Projector 150"** is the world's first ultra short throw projector with **advanced laser display technology (ALPD)** that delivers up to **150 inches of Full HD image quality** from a distance of 50 centimetres, with a brightness of **1500 lumens** and a **contrast ratio of 3000:1** and a product life of up to 20,000 hours.

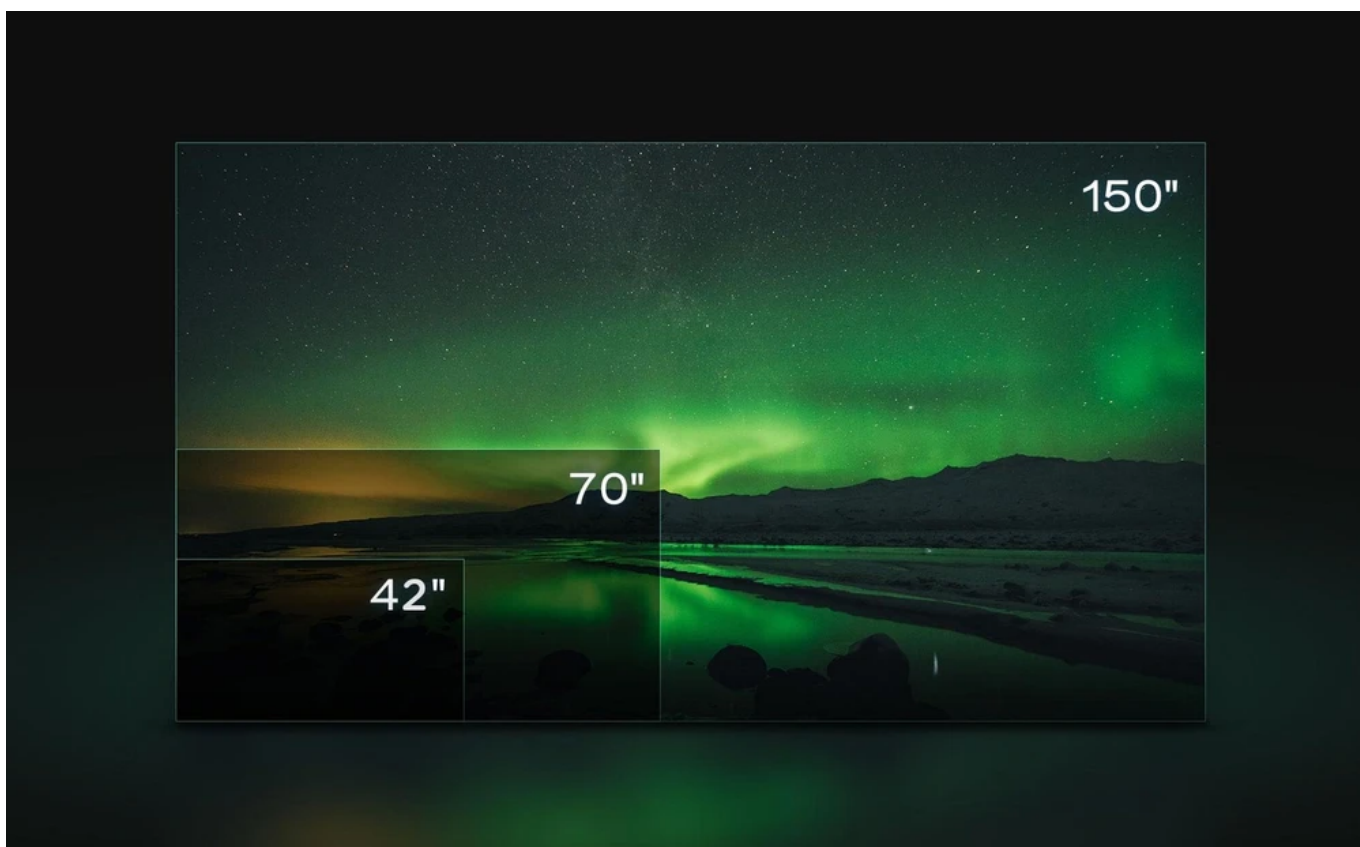

Features of the Mi Laser Projector 150"

- Very short projection distance
- Wall-mountable
- Massive projection area 150"
- ALPD 3.0 laser light source technology
- High colour accuracy and brightness
- 3000:1 native contrast
- Life span up to 20,000 hours

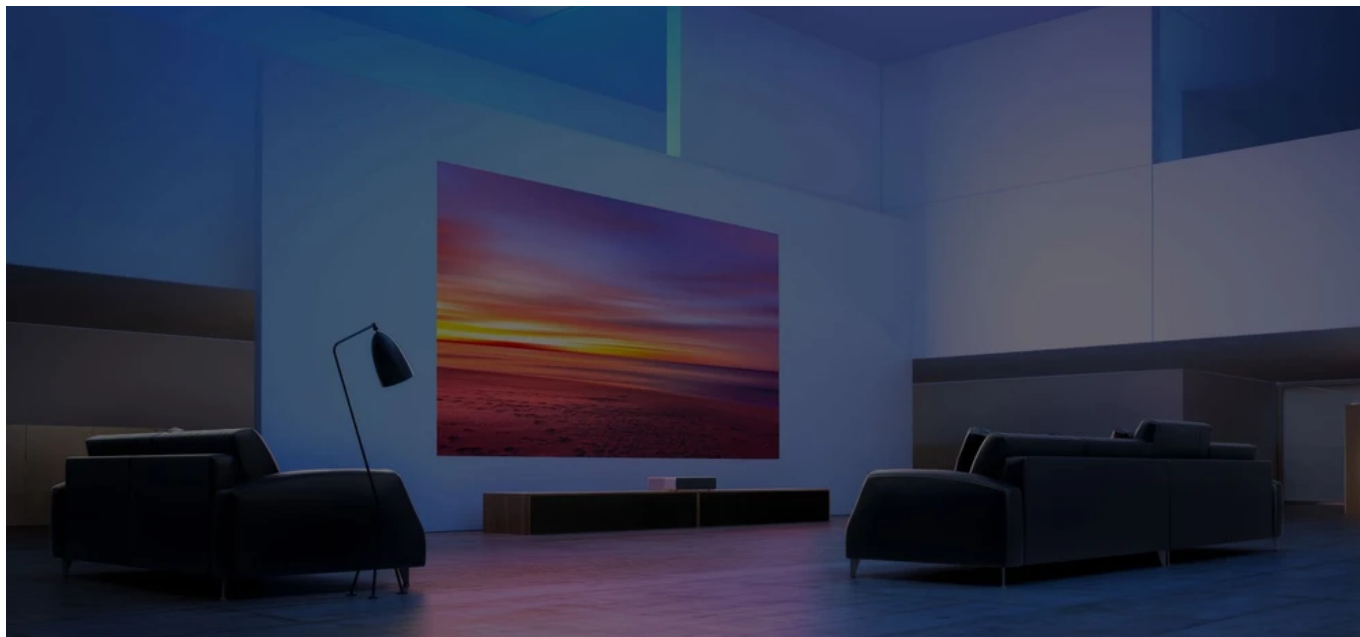

Turn your home into a private cinema

The Xiaomi laser projector can project a screen of up to **150 inches** in diameter, allowing the user to create a private cinema at home. The screen size can be easily adjusted between **80-150 inches**. The **Xiaomi Mi Laser Projector 150"** allows you to enjoy watching movies, listening to concerts or playing games on a huge screen.

Display a large screen, even from a close distance

The Xiaomi projector uses a very short 0.233:1 throw lens designed to eliminate the long range inconvenience that traditional projectors require. **The Mi laser projector** can be placed **5 to 50 cm away from the wall on a TV cabinet or mounted on the wall**. There is no need to deal with cumbersome wiring and obstacles.

Advanced laser projection technology

Equipped with the new **ALPD 3.0** laser display technology **from Appotronics**, which is the market leader in terms of colour reproduction, contrast and brightness. **The NTSC colour range of 85%** ensures rich and accurate colour reproduction. Images are not only bright and clear, ALPD 3.0 allows you to increase product life and reduce device size.

Native Contrast 3000:1

We often complain that it can be difficult to see important details in the cinema because dark images are not displayed clearly. The Xiaomi laser projector has a **contrast ratio of 3000:1**, far exceeding the 2000:1 standard in cinemas. It also has a **resolution of 1920x1080 and HDR support**, so details are clear, even in the dark.

Lamp life over 25000 hours

ALPD 3.0 Appotronics laser light source technology can effectively provide a lamp life of **25,000 hours or more**, equivalent to the time it takes to watch **more than 10,000 films** (2 hours each).

Dual full-range speakers + double tweeters with high sound quality

A good picture must be accompanied by good sound. **The Xiaomi laser projector** has the same proprietary speaker system developed for Mi TV, with dual high power, high sound quality built-in. The Xiaomi projector supports **dual DOLBY, DTS decoding**, which provides an audio-visual experience at the cinema level.
