Price: **69.00 zł** gross / 56.10 zł net

Manufacturer: XIAOMI

Referention number: DNXGHJLRFRMMKN

Information:

Replacement heads for an electric toothbrush provide effective and gentle daily oral hygiene. The soft rubber coating protects the teeth and increases brushing comfort, while the copper-free bristles reduce the risk of corrosion and are safer to use. The multi-level, diamond-shaped design and spiral arrangement of the bristles help clean tooth surfaces, interdental spaces and gums more thoroughly. The zoned design also supports a whitening effect, and the fading bristles remind you to replace the head, which is recommended every 3 months.

Product features

Cleansing brush replacement(s) period	3
Product colour	Blue
Product weight	4.3 g

Full product description

Better Daily Hygiene

Replacement heads for electric toothbrushes are accessories designed for daily tooth cleaning and gum care. The product offers a **soft rubber head** and **copper-free bristles**, contributing to safe oral hygiene and reducing the risk of corrosion of metal components. The diamond shape and multi-level bristle arrangement help reach interdental spaces, while gentle oscillation ensures comfort during brushing.

Key Advantages

- **Copper-free bristles** - reduces the risk of rusting and is safer for the mouth.
- **Soft rubber coating** - protects against impacts with teeth and improves cleaning comfort.
- **Spiral construction** - a double column with a spiral shape increases cleaning effectiveness on tooth surfaces.
- **Zone-specific bristle arrangement** - designated sections for cleaning interdental spaces, gum care, and whitening.
- **Fading bristles** - a visual reminder to replace the head.
- **Diamond shape** - better fitting to the contours of teeth and easier cleaning of gaps.

Features and Construction

The head features **multi-level crescent-shaped bristles** that adapt to teeth and facilitate plaque removal. The central bristles with a **spiral arrangement** reach deeper and assist in cleaning surfaces adjacent to the gums. The soft, oscillating design ensures gentle operation, which can be important for sensitive gums.

Cleaning Zones

The heads are designed with a special **zone division**: interdental zone, gum care zone, and whitening zone. Each zone has dedicated bristles, allowing for a comprehensive approach to oral hygiene. This makes it easier to focus on areas requiring more intensive care.

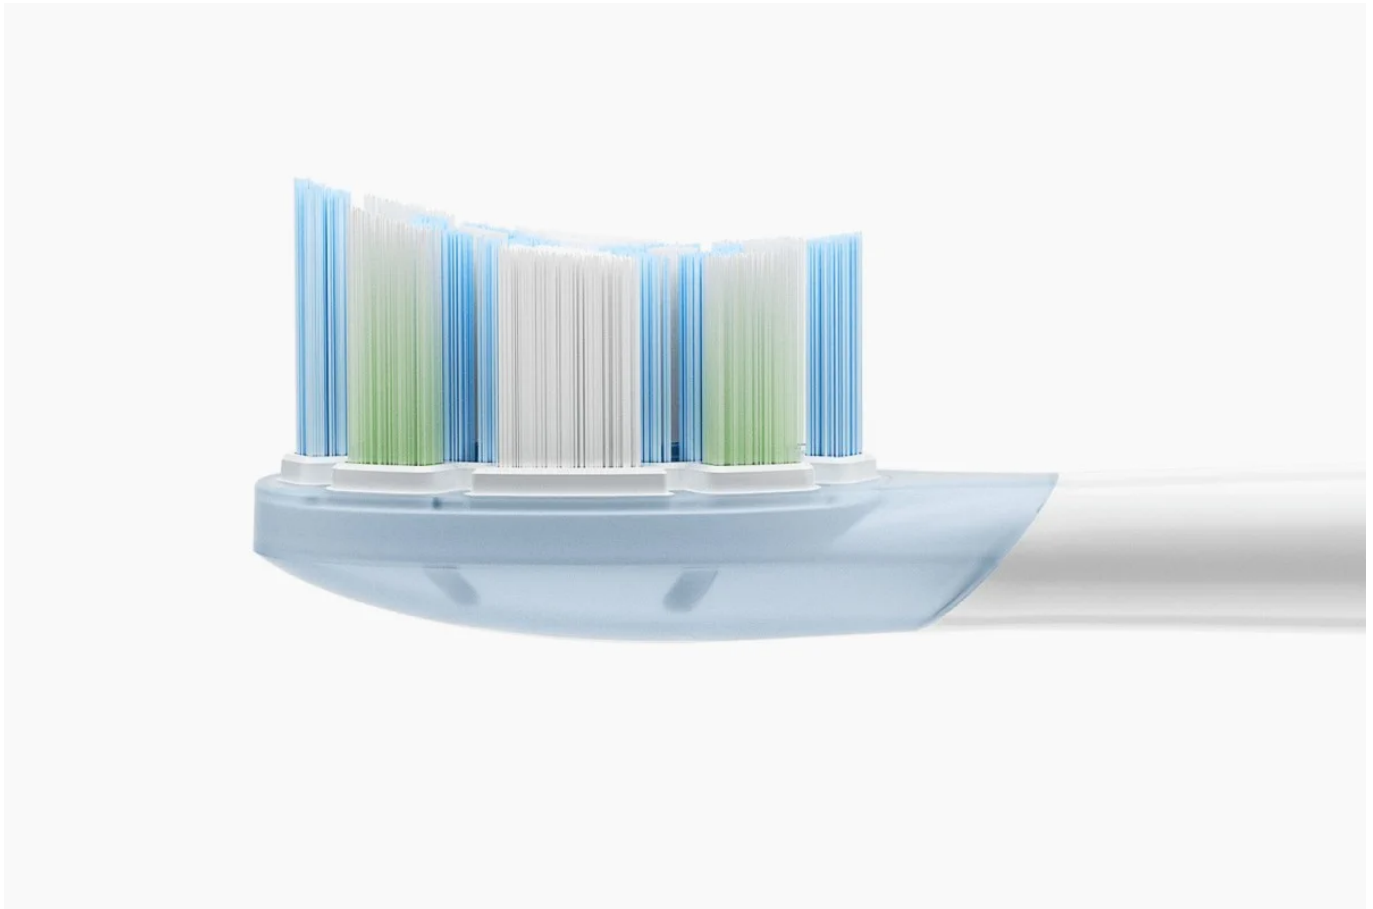

Safety

The copper-free bristle attachment technology means that the **copper-free toothbrush head** is healthier to use and less prone to corrosion. The soft rubber coating also serves a protective function, reducing the risk of abrasions and impacts with teeth during brushing. Such solutions contribute to comfort and longer lifespan of the head.

Monitoring and Replacement

The bristles with colour-changing elements serve as a reminder of wear: when the **green colour of the bristles fades**, it is advisable to consider replacing the head. The manufacturer recommends replacement every three months, which helps maintain cleaning effectiveness and oral hygiene. Regular replacement contributes to better care results.

Practical Application

The heads perform well with daily use on electric toothbrush models, where gentleness and effectiveness are important. With a combination of **oscillation**, soft rubber, and zone-specific bristles, it is easier to care for gums and reach interdental spaces. This solution is aimed at individuals seeking comfort and functionality in their daily care.
