### Information:

The cable reserve enclosure with frame is a practical solution for organised and safe storage of excess cabling, e.g. optical fibre. It is suitable for the IT and telecommunications industries, protecting the cable from mechanical damage. The frame can be easily mounted to various surfaces thanks to numerous mounting holes, and fitting and removal of the enclosure are quick and hassle-free. It is a convenient way to protect the cable and keep the installation tidy.

### Full product description

### Application

The cable supply enclosure with rack is an ideal solution **for maintaining order** and for the **safe storage of cabling supplies (such as fiber optic cable)**. It is used in both the data communications and telecommunications industries. It is possible to fix the rack to any surface with the help of numerous mounting holes. The housing protects the cable from mechanical damage. Disassembly and assembly of the housing does not cause the slightest problems. The racks guarantee
