Full product description

A modern solution for foot care

Electric foot file is an innovative device that allows you to easily and effectively care for the skin of your feet at home. Thanks to its cordless design and a set of 6 interchangeable rollers, you can effectively remove keratinized skin, smooth your heels and improve walking comfort. The device features a powerful motor that allows you to achieve great results after the first use, and the ergonomic design provides comfort and precision in use.

Convenience of use without cables

One of the key advantages of this file is its cordless design, which allows easy foot care anywhere. The lack of cables makes use convenient and spatially unrestricted, and the device's rechargeability eliminates the need for frequent battery changes. It's a solution that provides convenience and economy both in terms of use and cost.

Flexibility thanks to interchangeable rollers

A set of six rollers of varying grit allows you to customize the intensity of the treatment to meet your skin's individual needs. Whether you want to remove thicker layers of keratinized skin or gently smooth your feet, the file offers the right roller for each task. This flexibility makes the device ideal for both daily care and more intensive treatment on more demanding parts of the feet.

Professional care at home

The electric foot file is an excellent alternative to costly visits to beauty salons. Thanks to its power and replaceable rollers, it effectively removes dead skin, leaving feet smooth and soft. Its lightweight, ergonomic design makes the device easy to use and fits perfectly in the hand for complete comfort during use. It's a reliable solution that allows you to achieve a professional result at home.
