Full product description

EXTRALINK WHITE CURRENT FOLIOPS 4XL 450x550 50 PACKS

If you're looking for sturdy, secure and easy-to-use shipping packaging, **Extralink white 4XL courier foil pack**s are an excellent choice. Ideal for both e-commerce and document or small product shipping companies, they offer unparalleled protection for your shipments. With them, you'll ensure that your parcels look professional and their contents are as protected as possible during transport.

Easy and fast packaging

Extralink courier foil envelopes are equipped with a **built-in self-adhesive strip**, which makes the packing process extremely simple. You don't need to use additional adhesive tape - just close the envelope in one motion. This will save you time and increase the efficiency of your packing station.

Guaranteed security of contents

Each courier foil pack has a **self-adhesive strip** that guarantees a solid closure of the envelope. The closure is resistant to accidental opening and is difficult to damage without visible traces, which ensures discretion and protection of the contents. This ensures that the package will reach the recipient intact.

Resistance to transport conditions

Made of **55-micron** LDPE film, the foil packs are resistant to tearing, moisture and crushing. The opaque **white surface** further protects the contents from prying eyes. It's ideal for shipping both fragile and valuable items.

Ecological and practical

Extralink courier foil packs are made **from 50% recycled materials**, making them more environmentally friendly. Once used, they can be recycled again, which is in line with the policy of sustainable development. The high quality construction ensures durability while supporting an environmentally friendly approach to packaging.
