Information:

Xiaomi Smart Camera C500 Dual EU is a modern IP camera with 1440p image quality, 360° PTZ rotation and Wi-Fi 6 connectivity, providing a wide and detailed view without blind spots. Thanks to AI, it detects movement and recognises people, sending accurate notifications and reducing false alarms. H.265 compression helps save bandwidth and storage space for recordings. The camera also offers two-way voice communication and a built-in speaker, enabling convenient contact and remote management of home or office security.

Full product description

360° IP Camera with PTZ Rotating Mechanism and Wi-Fi 6

Xiaomi Smart Camera C500 Dual EU is an IP camera that offers 1440p resolution, a PTZ rotating mechanism and Wi-Fi 6 technology. Thanks to motion detection, two-way voice communication and a built-in speaker, you have full control over monitored spaces and can feel confident even when you are not nearby.

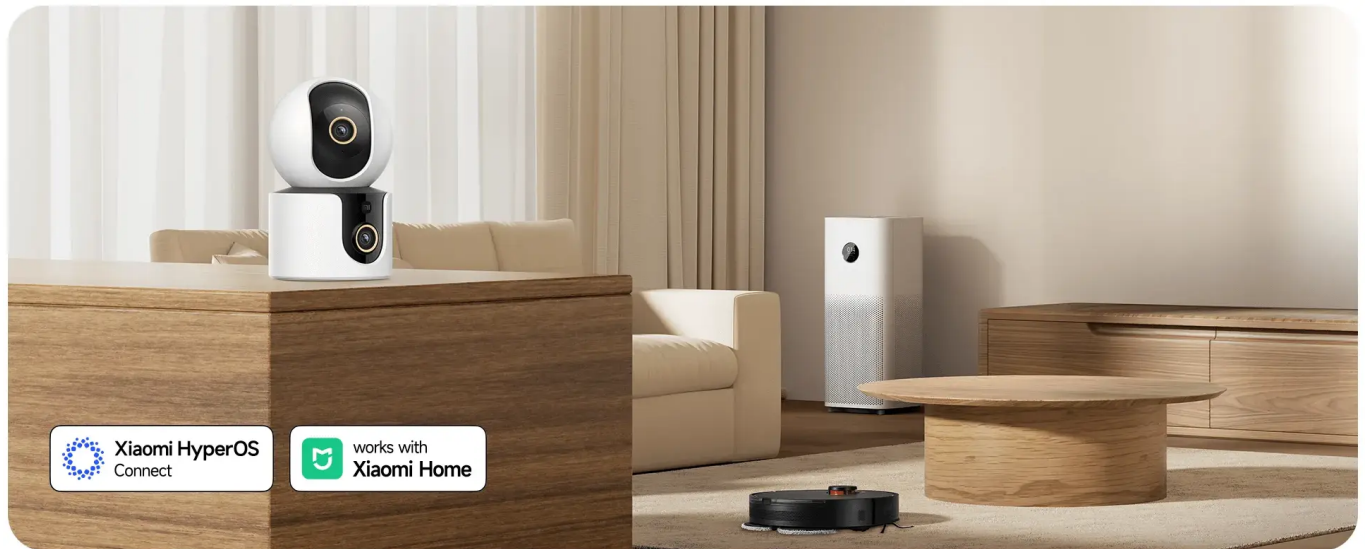

PTZ Rotating Mechanism and 360° Panoramic View

The **Xiaomi Smart Camera C500 Dual** is equipped with a **PTZ rotating mechanism**, which enables the camera to rotate a full **360° horizontally** and **vertically adjust**, allowing the viewing angle to be perfectly tailored to your needs. This means you do not have to worry about **blind spots**, as the camera monitors the entire space, providing you with a **full view**. No matter where it is located, you always have insight into every corner of your home or office.

High 1440p Resolution and Modern H.265 Encoding

With the **Xiaomi Smart Camera C500 Dual**, you can enjoy **1440p** resolution, which provides a **clear and detailed image** in every situation. **H.265** technology enables high-quality video transmission with lower bandwidth and storage usage, so your recordings are smooth and the image does not lose quality. The camera lens allows for a wider viewing angle, improving ease of use.

Artificial Intelligence and Motion Detection

The **Xiaomi Smart Camera C500** uses **artificial intelligence** (AI) to detect motion, enabling it to **recognise** people and **automatically send notifications**. Thanks to **advanced motion detection**, the camera can **track moving objects**, which significantly improves monitoring effectiveness and allows for a quick response to any worrying events. Intelligent algorithms also minimise the number of **false alarms**, making notifications more accurate.

Two-Way Voice Communication and Built-in Speaker

The camera offers **two-way voice communication**, allowing you to conveniently talk to household members or people within the camera's range. Thanks to the **high-power built-in speaker**, you can not only listen to what is happening in the monitored space, but also pass on important information or notifications. It is an ideal feature for staying in touch with family and guests, as well as for managing security remotely.
