Full product description

W59R ruggedized DECT handset

The **Yealink W59R**, certified to the stringent IP67 standard, is a professional ruggedized DECT handset with integrated Bluetooth and vibration alarm that is suitable for any demanding environment.

Shockproof, dustproof and waterproof

The **Yealink W59R** is a versatile companion with a certified 67 (IP67) protection rating and a long-life lithium battery that can be completely relied upon in complex and harsh working environments such as construction sites, factories and warehouses. Meanwhile, its hard rubberized surface protects the handset from **slipping, scratching and disinfection**.

Free mobile communication

The **W59R** allows users to roam and transfer calls seamlessly. Free your hands with Bluetooth headsets and a belt clip when it's inconvenient to hold a handset, such as in a factory or warehouse. Meanwhile, a vibration alarm prevents missed calls in noisy areas.

Trustworthy

A **series of excellent alarm functions**, including push-button alarm, no-motion alarm, man-down alarm and run alarm, are designed to minimize security risks. The administrator can set up different types of alarms for different members, and alarm calls will be sent automatically when an emergency occurs.

No distractions or interruptions

To bring wireless HD communication to the next level, **the W59R** has been developed using a number of leading technologies combined together, including **FNR, full duplex and Opus**. This means users can get a stable and high-quality audio experience even in a working environment full of noise or wireless interference.
