Full product description

Zyxel Multy U wireless network system

The Multy U device allows you to build a powerful wireless network over an area of **557 square meters** which will provide WiFi coverage throughout the house and support up to **128 devices** without any delay in data transmission.

Other dual-band competing WiFi systems reduce speed with more devices. The Multy U uses one band to communicate with other Multy U devices and can therefore support more devices without sacrificing quality or transmission speed.

Automatic connection by the fastest path

A WiFi network based on a grid architecture helps to organize **uniform signal sending**. No matter how you place the Zyxel Multy U WiFi, it automatically connects to the device that has the best connectivity even if one of the Multy U devices disconnects.

Ethernet cable for reliable connection

This product supports Ethernet, allowing each of these devices to be connected via an Internet cable, for best reliability and performance.

Check the status with the LED

Multy U is a stylish WiFi system that uses the beauty of light in the front of a technology product. The LED breathing effect is a periodic colour fashion that is unique among WiFi systems. You can check the status of the system at a glance with a light indicator.
