Full product description

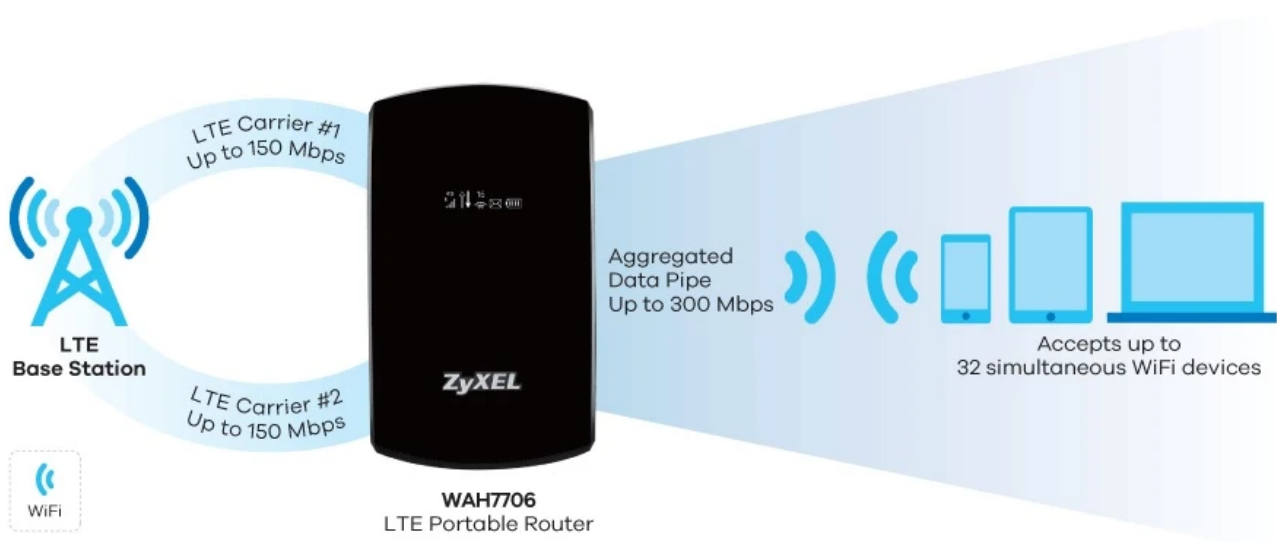

ZyXel WAH7706 - LTE mobile router

The Internet is everywhere, and network technologies allow you to cross borders. To make Internet access easier, ZyXel has developed the WAH7706 LTE router, which allows you to create a WiFi network - anytime, anywhere. It supports **LTE 4G+ and 802.11ac WiFi** technology. The maximum data transmission speed is up to 300Mbps.

Plug-and-play mobile router and high mobility

Thanks to its built-in **Router Zyxel WAH7706** battery, the Zyxel WAH7706 can use the WiFi network - even without a power supply nearby. The **Lithium-polymer cells** used are resistant to higher temperatures and extend the operating time. To access the Internet, the Zyxel WAH7706 only needs a SIM card. The use of such a router will allow for longer operation of smartphones, which instead of directly to the Internet will be connected to it. The device works as a mobile hotspot. Connection parameters and support of many frequencies guarantee operation all over the world.

Access to 4G LTE wireless network

Access to the WAH7706's WiFi network is facilitated by the use of dual frequency: **2.4 GHz (802.11n)** and **5 GHz (802.11ac)** at the same time. Up to 32 devices can be connected at the same time. Configuration is easy - via a web browser. Maximum transmission speed can reach up to **300 Mb/s** - thanks to compatibility with **LTE category 6** and band aggregation.

ZyXel WAH7706 LTE - features:

- Support for 4G LTE networks
- He works as a mobile hotspot
- Wireless WiFi support
- SIM card slot
- Long battery life
- Micro USB port
- Supports Windows, Mac and Ubuntu operating systems
