Full product description

Xiaomi 70mai Dash Cam A800 4K Car

The **Xiaomi 70mai Dash Cam A800 car DV R** features a high-quality night vision mode (3D DNR), an 8MP camera, and a dual-core HiSilicon processor - all of which allow the Xiaomi 70mai DVR to record **high-definition (4K)** video, as well as capture wide-angle (140°) video.

4K video resolution and high quality night vision mode (3D DNR)

With **3D DNR** (dynamic range noise reduction), the **70 Mai A800 DVR** can record high-contrast, high-quality videos in low-light conditions. For this reason, this mode works with great detail of what is happening. The **Sony IMX 415 CMOS** image sensor (**8MP**) and the **HiSilicon** dual-core processor - **Hi3556 V200** - help the car DVR record in **4K UHD** quality, while the viewing angle is **140°**.

Driving safety with ADAS

After starting the car, the **Xiaomi video recorder** starts working autonomously. At the same time, the **ADAS** device is activated. It alerts the driver to leave the lane and warns of an accident. This makes driving safer and smoother. The **70mai A800** can store data on speed and location changes with the **built-in GPS function**. The footage can be viewed on the smartphone app.

24/7 collision protection

When the car is parked, the parking mode is automatically activated. This mode uses a **3-axis gravity sensor**. In other words, the DVR will detect and record any collision with a car when the driver is not present. The **700 mai A800 DV R** records and saves video footage to a Micro SD card, which can hold up to 128 GB in looping mode. In the event of an accident, all video footage will be recorded. The 70mai manufacturer guarantees that the saved videos will not be overwritten.

Application support

To connect the **70mai A800 car DVR** to your smartphone, you don't need to use a network. The device easily connects itself over its own **Wi-Fi** network, giving you instant access to your recorded videos. You can also share recorded videos.
