Full product description

70mai Midrive T02 Pressure Control System

Want to increase travel safety and avoid premature tread wear? Install the **Xiaomi 70mai TPMS Lite** tire pressure monitoring system in your car. It consists of a central unit with an information display and four wireless sensors that transmit information via Bluetooth. In addition, the unit measures the temperature inside the tires and even syncs with your smartphone.

Always in control

A drop in tire pressure has a negative impact on driveability, increases **fuel consumption** and accelerates tread wear. That's why it's important to keep your tires at the recommended pressure for your vehicle. A tire pressure monitoring system is a great alternative to regularly maneuvering the gauge to save time and effort. With the **Xiaomi 70mai TPMS Lite**, you can instantly check the pressure and temperature of each of your four tires by looking at the **LCD display** of the main unit. And all thanks to the fact that the wireless sensors transmit the information in real time. This keeps you safe from unpleasant surprises on the road.

Mobile app and easy installation

A custom **mobile app** is available for more precise adjustment. Its intuitive interface allows you to set your preferred front and rear air pressure and temperature values. When the system detects values that are too low or too high, the head unit alerts the driver with an audible signal. Installation and setup of the **Xiaomi 70mai TPMS Lite** system takes little time and **does not require a visit** to the tire **dealer**. The external sensors screw directly into the connectors instead of the original caps, and the main unit with adhesive pad can be easily attached to the dashboard. In addition, vandal-resistant caps and a matching key are included to help prevent sensors from being stolen or lost.

Practical power supply

The main unit is powered by a **500 mAh** rechargeable **battery** that can be charged via a **solar panel** or any USB Type A port with the included cable. The wireless sensors are powered by batteries that provide up to **10 years of battery life** if you drive for 2 hours a day. To save power, the system automatically turns on while driving and shuts off after 5 minutes of inactivity.

Main features

- Tire pressure measurement with an accuracy of 0.1 bar
- Temperature display with 3 °C accuracy
- Automatic sensor polling every 5 seconds
- Main unit with LCD display
- Configuration via the enterprise application
- Audible alarm for unauthorized readings
- Quick installation without tools
