Full product description

Smart door and window opening sensor by Aqara

Aqara Door and Window Sensor P2 not only includes all the advanced automation and security features that Aqara is known for, but also gives users the ability to connect it directly to third-party **Thread routers**, such as smart speakers, and enjoy all the benefits of the Matter smart home standard.

Native Matter support

Entering the Matter era, users no longer need to worry about different ecosystem platforms and technical protocols, and only need the Matter app and a Matter-compatible **Thread Border Router**. This means that connections between ecosystems and platforms become simpler and easier.

Monitoring of opening/closing status

Stay informed and safe with real-time notifications on your smartphone whenever the sensor detects activity. You'll never miss a potential security threat and have everything under control, whether you're at home or away.

Local home automation

The **Aqara Door and Window Sensor P2** can be integrated into a **smart home ecosystem** to enable advanced automation, such as adjusting thermostat settings or activating security cameras when a door or window is opened. What's more, the **automation is done locally**, without the need for the cloud, so users' privacy is protected and it works even when there is no internet connection.

Maximize productivity with voice assistant

Aqara Door and Window Sensor P2 supports Apple Siri and Alexa. With these voice assistants, you can receive notifications of events, such as door entrances, or ask if the door is open, so you can keep everything under control at home. This makes daily tasks run smoothly and conveniently, allowing you to make the most of your time.

Easy installation and maintenance

The compact and easy-to-stick design makes it easy to integrate P2 into various home environments, and users can place it in a variety of locations and scenarios. With a powerful CR123A battery, users don't have to worry about frequent battery changes or maintenance.

Additional features in the Aqara Home app

Configurable settings via the **Aqara Home app** will be expanded with the launch of Hub M3 in the near future. Users can fine-tune the sensor's sensitivity from 1-3 cm and adjust sleep time based on specific scenarios, as well as use a programmable button to trigger various smart home automations. In addition, a **tamper alarm function** will send instant notifications to a smartphone if the sensor is tampered with.
