Aqara

Manufacturer: AQARA

Referention number: DNXGJPPPIRMNJl

Information:

Aqara Hub M200 (HM-G03D) is an advanced smart home hub that connects Matter and Zigbee devices, providing convenient integration with Apple Home, Google Home, Alexa, SmartThings and Home Assistant. Thanks to the built-in 360° IR transmitter, it also allows control of traditional devices such as TVs, air conditioners and projectors, while the IR Learning function makes it easy to add them to automations. Local automation works quickly, reliably and without the internet, enhancing privacy. The hub supports PoE and dual-band Wi-Fi 6 with WPA3, and also offers a 90 dB speaker for alarms and notifications.

Full product description

Full Control of the Smart Home

Aqara Hub M200 (HM-G03D) is an advanced **smart home hub** that connects Matter and Zigbee devices. It works as a **Matter bridge**, offering seamless and extensive integration with Apple Home, Google Home, Alexa and SmartThings. The built-in **360° infrared transmitter** enables control of traditional devices, while **local automation** ensures fast response times, reliability and complete privacy for your system.

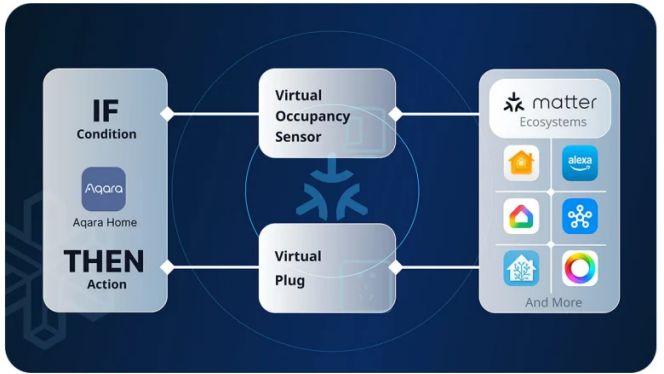

Key Benefits of Aqara Hub M200

- **Unified Ecosystems:** Works as a Matter bridge, connecting Aqara Zigbee devices with Apple Home, Google Home, Alexa and SmartThings, which **simplifies home management**.
- **360° IR Control:** Covers control of infrared devices, helping to include them in **smart home automation** without the need to buy new devices.
- **Reliability of Local Automation:** Automations work **offline**, offering high response speed and independence from an internet connection.
- **Power and Network Flexibility:** Support for **PoE** and **Wi-Fi 6** (dual-band) contributes to a stable, simple installation.

Multi-Platform Integration

Hub M200 makes your **smart home** a coherent and easy-to-manage ecosystem. As a **Matter bridge**, it enables Aqara Zigbee devices to communicate with key platforms such as **Apple Home, Google Home, Alexa, SmartThings and Home Assistant**. This means you retain the unique features of Aqara devices while gaining flexibility in choosing a platform. It eliminates the need to use multiple separate apps, **offering unified control** of everything from one place.

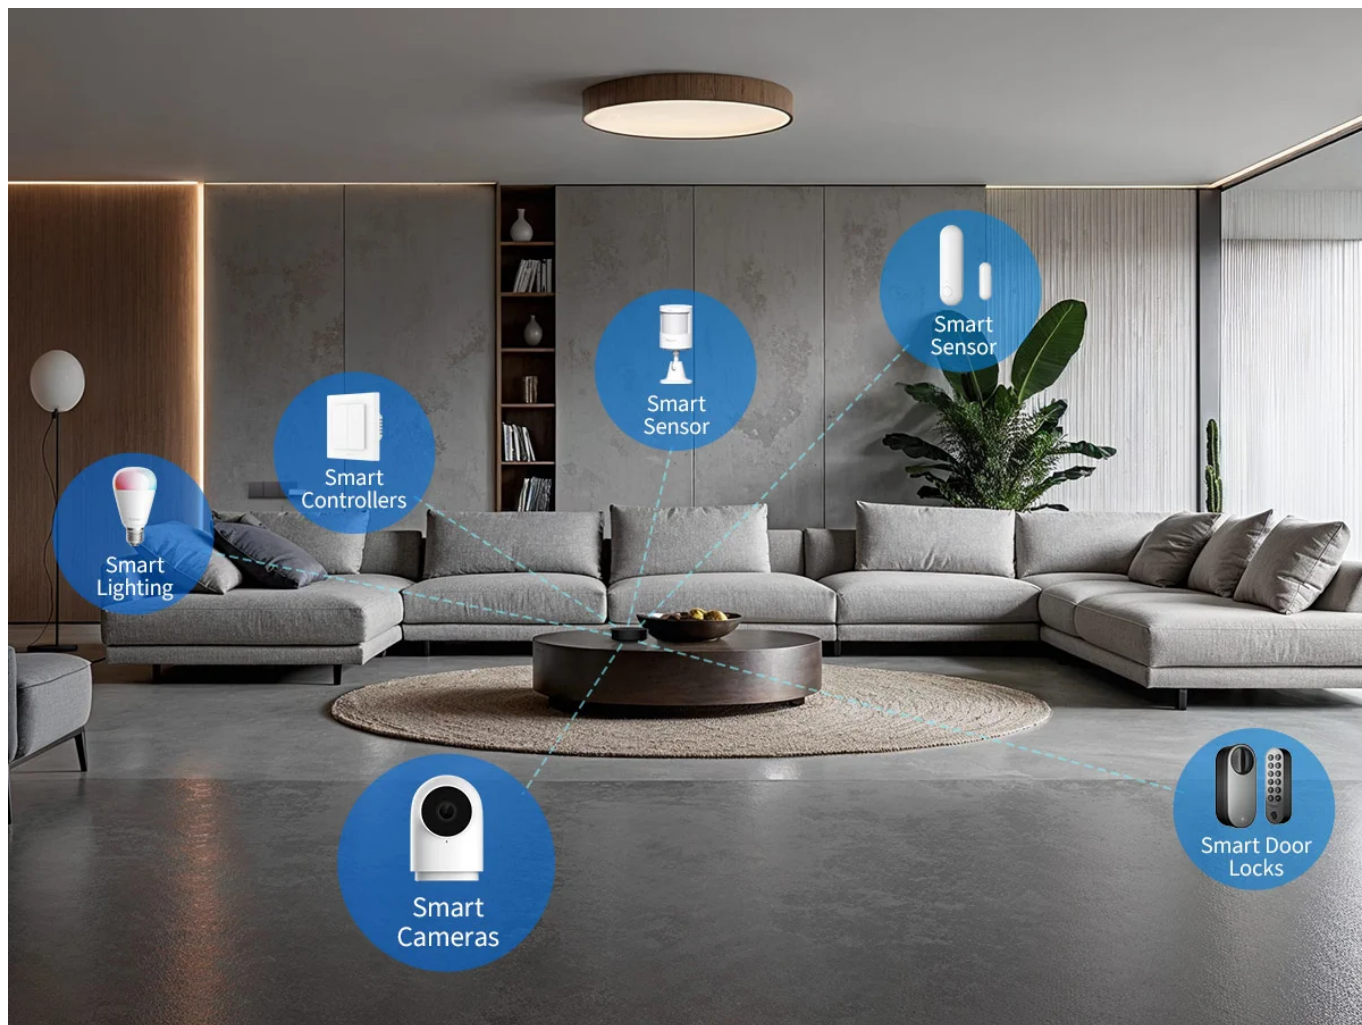

Control Devices via Infrared

The built-in **360° IR transmitter** and IR Learning function allow traditional equipment such as TVs, projectors or air conditioners to be included in the system. Aqara Hub M200 ensures that the status of these devices is always up to date, eliminating the problem of discrepancies between the physical remote and the app. This helps automate older equipment. Thanks to compatibility with **Matter AC Control**, IR air conditioners can gain thermostat functions and be controlled by voice when paired with Aqara climate sensors, significantly expanding the system's capabilities.

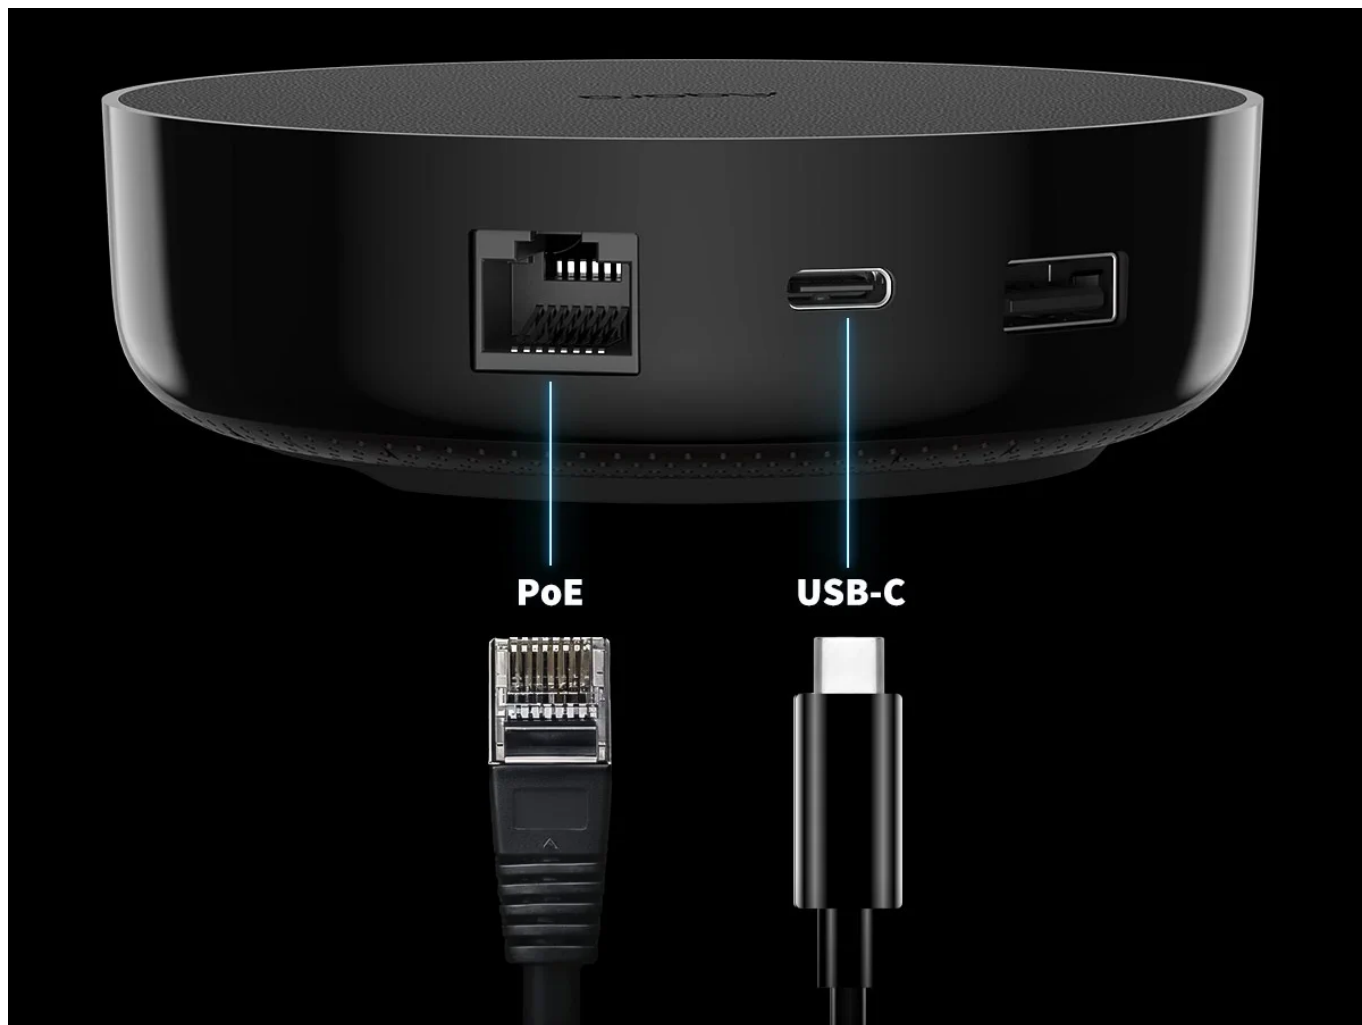

Fast and Quiet Automation

Automation 2.0 is an improved system that makes it easy to create scenarios, and local automation is its key feature. This means lights, air conditioning and sensors respond instantly, even when the internet connection drops. Running **local automation** rules increases the response speed of your system and also guarantees **privacy**, as sensitive data does not need to leave your home network.

Advanced Network Connectivity

Hub M200 offers **two connection options** - wired and wireless. The **PoE (Power over Ethernet)** port allows power and data transmission through a single Ethernet cable, simplifying installation and contributing to a more stable connection. For wireless connectivity, it uses dual-band **Wi-Fi 6 (2.4 GHz and 5 GHz)** with WPA3 security, ensuring faster and more stable communication within your **Thread Mesh** network.

Built-in 90dB Speaker

The integrated speaker with a volume of up to **90dB** gives you clear **doorbell notifications, security alarms and warnings**. It also allows custom audio messages to be played, helping to keep you at ease and providing greater flexibility in managing the system and communication at home.

Aqara Hub M200 is an excellent choice for:

- Users with **Zigbee** and **Matter** devices looking for unified control over all protocols.
- People wanting to automate traditional IR devices (TV, AC) as part of a **smart home**.
- Integrators and advanced users who value **stability** thanks to PoE power and **local automation**.
- Homeowners who care about **privacy** of data and system response speed.
