Aqara

Manufacturer: AQARA

Referention number: DNXXGGOJSJRMNGI

Information:

Aqara Panel Hub S1 Plus is a versatile smart home control panel, combining a 6,9-inch touchscreen, wall switches, a Zigbee 3.0 hub and Matter support. It enables convenient management of lighting, blinds, thermostats, scenes and Aqara cameras, as well as viewing video doorbell footage and opening a smart lock. Thanks to four microphones and the Aqara Copilot assistant, it allows voice control from up to 10 metres away. It offers customisable dashboards, up to 10 configurable screens, energy consumption monitoring, and automatic wake-up and brightness adjustment for greater comfort and savings.

Product features

Connectivity technology	Wireless
Operating current	2 A
Resolution	1440 pixels
Shape	Rectangle
Touchscreen	Yes
Package depth	86 mm
Package height	42.2 mm
Package width	172 mm
Built-in camera	No
USB charging port connector type	USB Type-C
Wi-Fi band	Dual-band (2.4 GHz / 5 GHz)
Wi-Fi	Yes
Bluetooth	Yes
AC input frequency	50 Hz
AC input voltage	200 V

Power source type	AC
Operating voltage	5 V
Product colour	Black
Virtual assistant	Amazon Alexa / Google Home / Apple HomeKit
Built-in display	Yes

Full product description

Aqara Panel Hub S1 Plus - Comprehensive Control of Your Smart Home

Aqara Panel Hub S1 Plus is an advanced control panel that combines the functionality of a lighting controller, wall switch and smart home management centre in one device. Thanks to the built-in 6.9-inch touchscreen, voice control and integration with the mobile app, it offers convenience, precision and flexibility in everyday use. The device supports Matter and Zigbee 3.0 protocols, allowing seamless connection with Aqara devices and third-party systems. The panel makes it easy to manage lighting and temperature, as well as stream images directly from Aqara cameras.

Convenient Smart Home Management

The Aqara S1 Plus panel enables comprehensive control of smart home devices from one place. The built-in two relay switches and six wireless switches make it easy to manage both lighting and other devices. The system automatically selects the most suitable dashboard layout, which can be customised to suit your needs. Adjusting brightness and light colours, blind settings or thermostat control are just some of the options that can be precisely tailored to your preferences.

Integration with Ecosystems and Broad Compatibility

The panel works as an advanced Zigbee 3.0 hub, supporting 2.4 GHz and 5 GHz Wi-Fi networks, which ensures a stable connection with a wide range of Aqara devices. Thanks to Matter support, users can integrate the panel with popular smart home systems such as Apple HomeKit, Amazon Alexa or Google Home. This versatility makes it easier to manage devices from different manufacturers and create advanced automation scenarios. To use the device with a specific Matter ecosystem, a Matter Controller for that ecosystem is required.

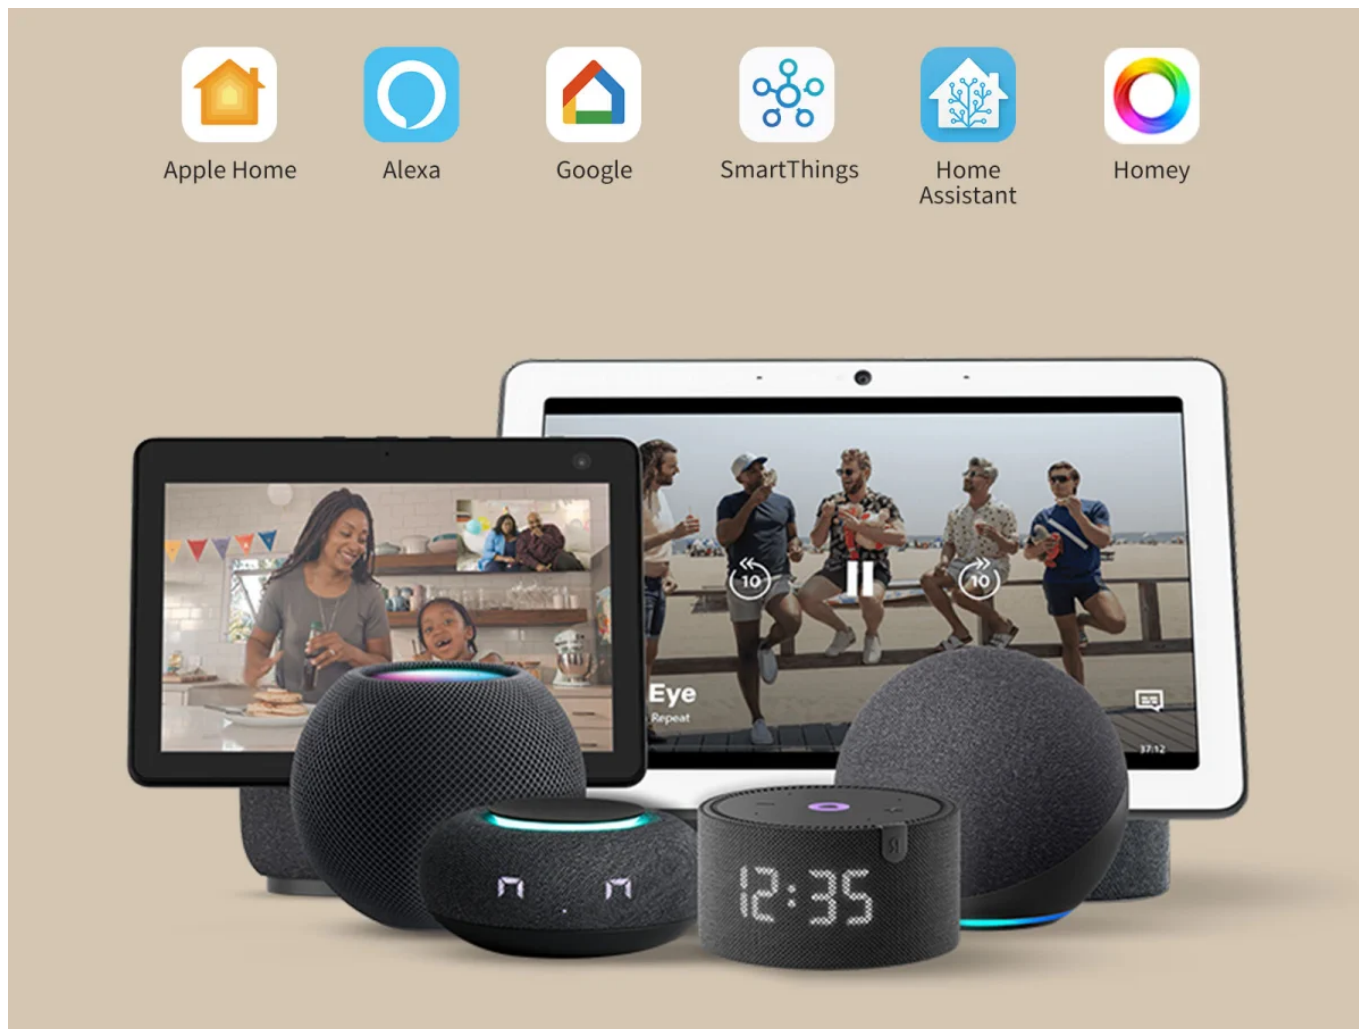

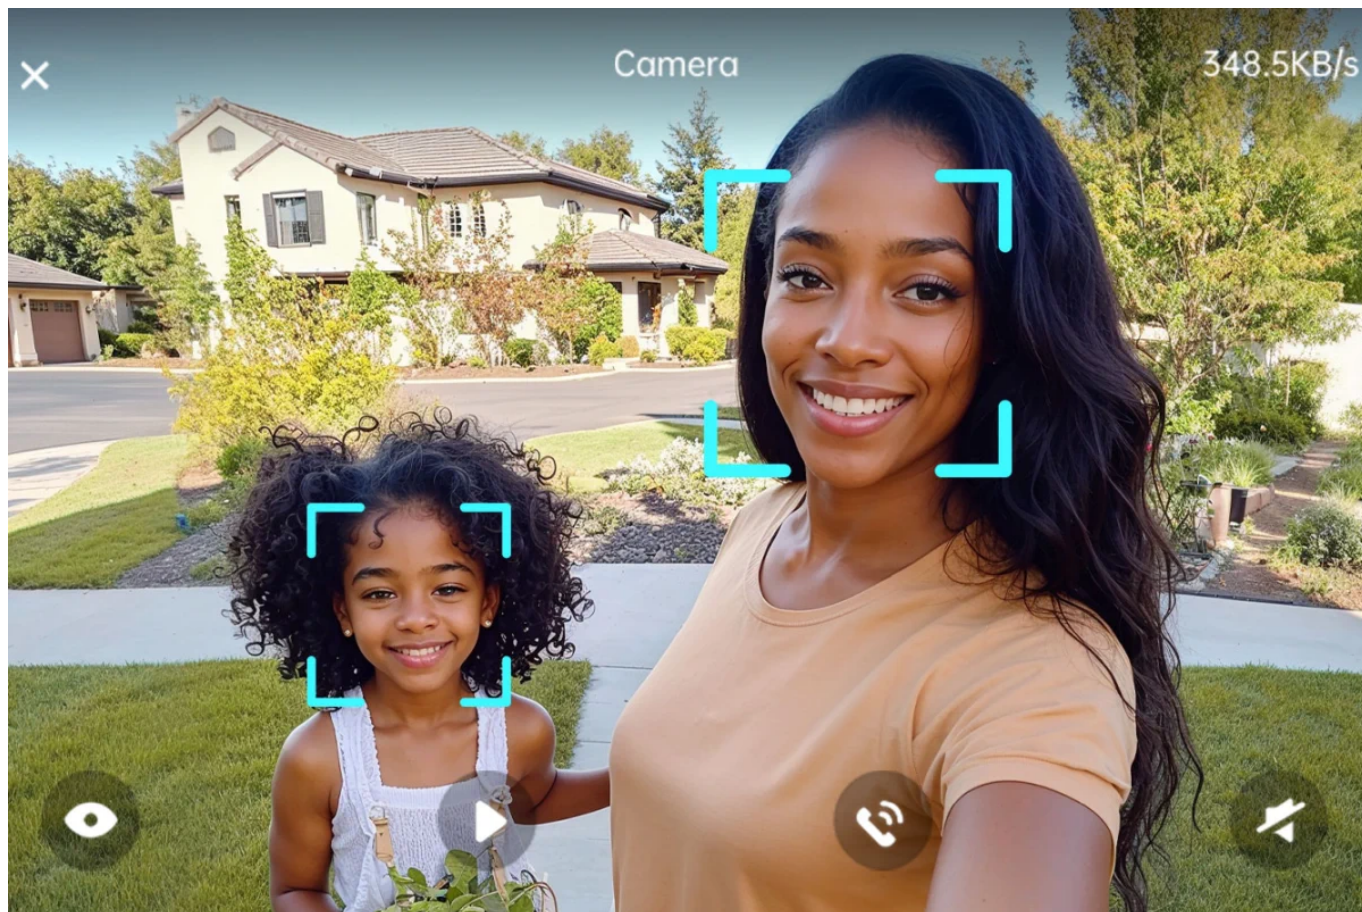

Image Streaming and Camera Management

The panel enables image streaming from devices such as the Aqara Smart Doorbell G4, allowing users to monitor who is at the door in real time, carry out two-way communication and open a smart lock directly from the screen. In addition, the device allows you to manage several Aqara cameras at once, significantly increasing the efficiency and consistency of home security management.

Convenient Voice Control

The panel is equipped with four advanced high-sensitivity microphones that enable precise voice control. Simply say “Hi, Aqara” or “Aqara” to activate the built-in Aqara Copilot voice assistant. This function allows you to control devices, launch scenes, check the weather or carry out other commands even from a distance of 10 metres in an unobstructed space.

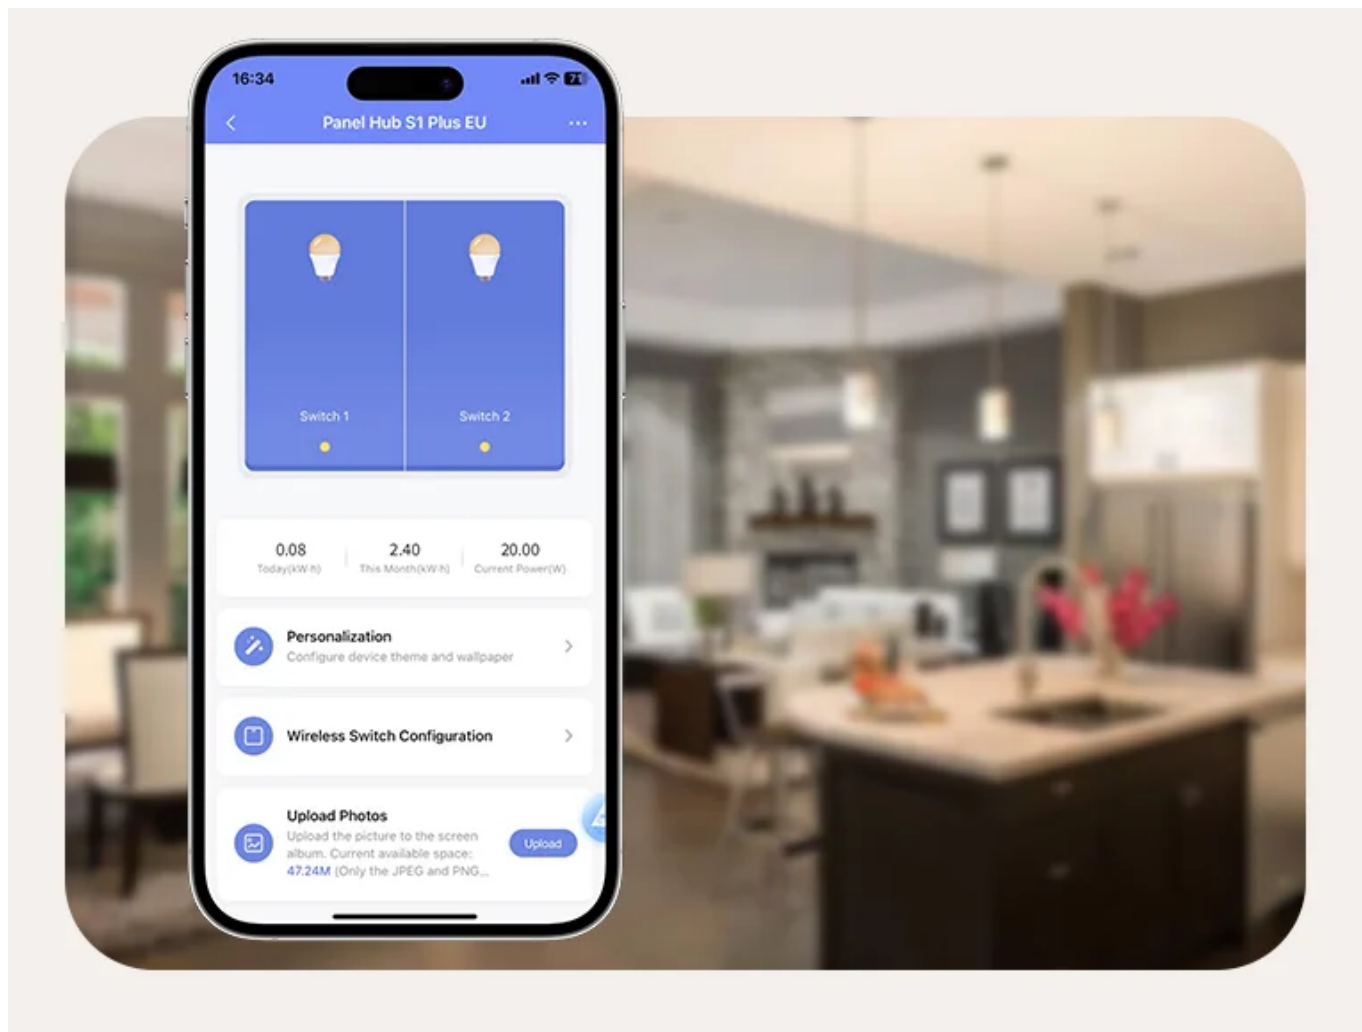

Customisation and Flexibility

The panel offers editable cards and dashboards that the user can tailor to their preferences. The ability to add Aqara devices, create scenes or personalise graphic themes makes operation intuitive and adapted to individual needs. With support for up to 10 configurable screens, every user can create a solution that matches their daily habits.

Energy Consumption Monitoring

The device monitors the energy consumption of connected appliances and generates detailed daily, weekly and monthly reports. Thanks to this data, you can better manage energy use, reduce costs and improve the home's energy efficiency, supporting sustainable development.

Automation and Proactive Functions

The panel automatically activates the screen when motion is detected at a distance of up to 2.5 metres, increasing interactivity and reducing light emission when not in use. The built-in automatic screen brightness adjustment function improves user comfort, protects the eyes and ensures excellent visibility in various lighting conditions.
