Full product description

Roller shutters under your control

The Aqara Shutter Switch H2 EU is a wall switch for blinds that makes controlling blinds and shades intuitive and fully integrated into the smart home ecosystem. With support for **Thread and Zigbee protocols**, it provides seamless connectivity to platforms such as Apple Home, Google Home and Amazon Alexa. It offers **precise control** over the position of the blinds, and its programmable buttons allow the creation of advanced automation scenarios.

Key advantages of Aqara Shutter Switch H2 roller shutter controller

- **Full control:** Control the position of blinds from anywhere, at any time, with 1% accuracy.
- **Convenient automation:** Create personalized scenes with dedicated wireless buttons.
- **Universal installation:** Compatible with popular 55mm standard frames for easy installation.
- **Smart integration:** With support for Thread and Zigbee protocols, the device seamlessly connects to many smart home platforms.

Flexibility of protocols

The device is distinguished by its support for two communication protocols. Operating in **Thread** mode, it enables easy integration into **Matter** ecosystems without the need for an additional Aqara gateway. At the same time, **Zigbee** mode allows you to take advantage of Aqara's extensive features and ensures compatibility with existing gateways without sacrificing support for Matter. The flexibility of choice means you can tailor the integration to your needs.

Precise control

The Aqara Shutter Switch H2 EU wall switch offers **precise control** of the blinds' position **from 1% to 100%**. This helps adjust the amount of light in the room, protects furniture from the sun's rays, and takes care of privacy. Full control over the position of the blinds is available from the app, with buttons, voice or through schedules. You have full freedom to create the right climate in your home.

Calibration on your terms

To achieve optimal performance, the device offers three calibration options. **Intelligent Calibration** provides quick setup without effort. **Custom Calibration** allows you to fine-tune settings when you need personalized performance. And **Route Calibration** helps maintain long-term accuracy. These solutions ensure that roller shutters always behave exactly as you expect them to.

Custom buttons for automation

In addition to the standard shutter control with buttons on the left side, the Aqara Shutter Switch H2 EU offers two **wireless buttons** on the right side. These can be freely programmed to trigger a variety of automation scenes. Possibilities include not only blinds, but also **control of lighting, music or other devices**. This helps create personalized routines, such as a morning wake-up scene activated with a single touch.

Discreet LED indicator

The Shutter Switch H2 EU has a **discreet LED indicator** that is designed not to distract you. **It only turns on during operations**, and otherwise remains off. It makes sure that you can enjoy a peaceful night's sleep without any additional light source.

Mounting in 55 mm modules

This roller shutter switch fits popular **55 mm** (55 mm x 55 mm) **standard** modular switch systems. It supports popular manufacturer frames such as **Gira System 55 and Merten M**. The standardized design simplifies the installation process, minimizing the need to purchase custom components, and provides a consistent look throughout the home.

Aqara Shutter Switch H2 roller shutter controller is a great option for:

- Owners of blinds, shutters and other window coverings with two-way motors.
- Individuals who are looking for a solution to integrate with the Apple Home, Google Home and Amazon Alexa ecosystems.
- Users who want **precise control** over the amount of light in rooms.
- Anyone who wants to expand their smart home with advanced automation scenarios.
