Full product description

Aqara Smart Pet Feeder C1

The automatic cat and dog feeder features integration with the Aqara smart home system and supports **voice control** via Amazon Alexa, Google Assistant and Siri. All you have to do is set the time and portion size in advance, and the automatic feeder does everything by itself. The feeder is designed for small to medium-sized cats and dogs. The food storage container holds **about 1.7 kg of dry food**.

Aqara Smart Pet Feeder C1

Voice Controls

The pet feeder has a **built-in microphone**, with which you can record a message to your pet. Also, you can do multi-room or increase the volume with hubs with custom bells. The device supports voice control. **Siri, Alexa, Google, IFTTT** are supported by creating Aqara Home scenes and triggering them with your voice or using automation to make feeding easier.

Remote control application

Whether you're on the go, at work, or lounging on the couch, you can easily check your daily feeding or snack with the app. By setting plans or schedules, your pet will be fed on a regular basis. The app will work even when there is no Internet connection or when Zigbee hubs fail.

Dual power options

In addition to being powered by a USB-A port, the **C1** pet feeder **supports an optional D-type (LR20) battery** power supply that keeps it connected even when there is no constant power supply. Even when the Internet is disconnected, the scheduled schedule still works so you won't have to worry if you can't be home anytime soon.

Safe for your pet

All food-contact parts of the **Aqara Smart Pet Feeder C1** are made of pet-safe materials. The stainless steel bowl, plastic reservoir and rubber dispenser wheel are detachable, and each component can be easily removed and cleaned.

Food tank and moisture resistance

The large visible **4 liter** (16 cup) reservoir can hold **about 1.7 kg** (3.7 pounds) of typical pet food, giving you up to a month of feeding a 4 kg (9 pound) cat. A dehydrator is included and will keep the food dry and fresh.

Be creative and train your pet

Using Aqara sensors or wireless training controllers, teach your dog or cat to press the Mini Switch, move the Cube T1 Pro or touch the bowl with the included vibration sensor, and the Feeder will dispense food to reward your pet.
