Full product description

Aqara Valve Controller T1 - Water control for your smart home

With the Aqara Valve Controller T1 you can automate the control of water flow in your home, increasing your safety and comfort. This smart controller allows you to remotely manage your water valves, which is especially useful in the event of an emergency or the need to shut off water immediately. With easy installation and compatibility with smart home ecosystems, you can quickly add this device to your Zigbee network and enjoy a new level of home automation.

Easy installation and operation

The Aqara Valve Controller T1 requires no complicated tools or specialized knowledge to install. The device can be installed on an existing valve in minutes, making it an ideal solution for anyone who wants to quickly increase the security of their home. **The Zigbee 3.0 wireless**

connection ensures stable and fast communication with other devices on the network.

Remote control via app

Thanks to integration with the **Aqara Home** app , you can remotely control the valve from anywhere in the world. In the event of a malfunction, such as a leak detected by a sensor, you can immediately shut off the water supply, preventing further damage. Automating this process greatly increases the safety of your home, protecting you from costly repairs.

Compatibility with different types of valves

Aqara Valve Controller T1 is compatible with various types of valves, including lever and butterfly valves. Thanks to its mounting flexibility, the device will work well in both modern and older water systems. This solution **provides full control over the water system**, regardless of the type of installation.

Enhanced security through integration with sensors

Combining the Aqara Valve Controller T1 with other sensors, such as [the Aqara Water Leak Sensor](#), allows you to **automatically shut off water if a leak is detected**. This further protects your apartment or home from flooding, and you can enjoy peace of mind knowing that your property is safe. The system can also work in tandem with the Aqara Hub, allowing you to remotely control and automate the entire process.
