Full product description

Power strip

A power strip, or power distribution unit (**PDU**), is a device with multiple outputs designed to distribute electricity, especially to computer cabinets and network equipment located in a data center. An additional advantage is the **protection of electronic apparatus from the harmful effects of power line surges**.

Easy to install

Armac M6 Rack was created for simple and quick installation in 19" racks. Thanks to the rails on the back of the enclosure, mounting the strip in the cabinet does not require any special skills.

Quality materials

The housing is made of high-quality fireproof material, which will protect the strip from burning in the event of a fire. In addition, the **structure is resistant to mechanical damage and shock**, so it will remain intact for years.
