Full product description

Extralink cosmetic mirror - illumination that works

Daily grooming and makeup require precision - without good light, it's hard to talk about accurate contouring, putting on contact lenses or adjusting eyebrows. **Extralink LED Cosmetic Mirror** is an accessory that **effectively illuminates the face**, allowing you to focus on details - where daylight is not enough. With its **foldable design, pink color and USB power supply**, you get a combination of functionality and aesthetics in one tool.

Adjustable LED backlighting

Built-in LEDs illuminate the entire surface of the mirror, evenly lighting the face from all sides. Available modes - **warm, cool and mixed** - allow you to adjust the light to match the time of day or ambient conditions. You can also **adjust the intensity of the light** to avoid glare or increase precision with makeup details.

Foldable and durable design

The folding case protects the mirror from damage, and when unfolded it acts as a practical stand. This **design** allows you to position the mirror at different angles and ensures stability on the countertop. Thanks to its thickness of 1.5 cm, **it will fit into a handbag or suitcase** without taking up unnecessary space.

Touch control button

At the bottom of the panel is a **convenient touch button** that allows you to control the backlight. **A short touch changes the color of the light, and holding it allows you to adjust the intensity.** Operation is intuitive and does not require force or complicated movements - you will do everything with one finger.

USB power supply

The mirror is powered by a **built-in rechargeable battery**, which **you charge using a USB type B cable** (included). A full charge takes about 2 hours and lasts for about 2.5-3 hours of use. This way you don't have to buy batteries - just plug it into any USB source and you're done.
