Price: **199.00 zł** gross / 161.79 zł net

Manufacturer: BETAFPV

Referention number: DNXXGOPLIRMMNP

Information:

BETAFPV 1102-18000KV are lightweight and efficient brushless motors for 1S drones, ideal for microdrones, Whoops, racing and freestyle. They weigh only 2.95 g, which reduces the drone's mass, improves manoeuvrability and may extend flight time. The high 18000KV provides an instant throttle response, dynamic acceleration, strong thrust, and precise, stable control during flight.

Full product description

BETAFPV 1102-18000KV Brushless Motors - lightness and power in one

BETAFPV 1102-18000KV are efficient brushless motors which, thanks to their light weight and high power, allow smooth and precise manoeuvres. Designed for drones powered by **1S batteries**, they are suitable for both racing and freestyle flights.

1102 Brushless Motors

Lightweight design for greater agility

The motors weigh only **2.95g**, which helps reduce the drone's overall weight and increase its agility. The lower weight also means better energy efficiency, which can translate into longer flight time. This is a **great solution for pilots who value speed and precision** of movement.

High KV for dynamic flights

Thanks to **18000KV** the motors provide quick throttle response, allowing for rapid acceleration and dynamic manoeuvres. Support for **1S voltage** means they work perfectly in micro drones and Whoop models. The combination of high rotational speed and compact size delivers strong thrust and flight stability.
