Price: **99.00 zł** gross / 80.49 zł net

Manufacturer: BETAFPV

Referention number: DNXGGOPMDRMMKI

Information:

BETAFPV 1506 3000KV is an efficient brushless motor for dynamic and precise flights. It offers strong acceleration, stable operation and a wide 3-6S power supply range, giving great flexibility in battery selection. The lightweight 14 g design improves the drone's agility and helps extend flight time, while the 1.5 mm shaft and M2 mounting make quick installation easier. It is a solid choice for pilots who value power, control and efficiency.

Full product description

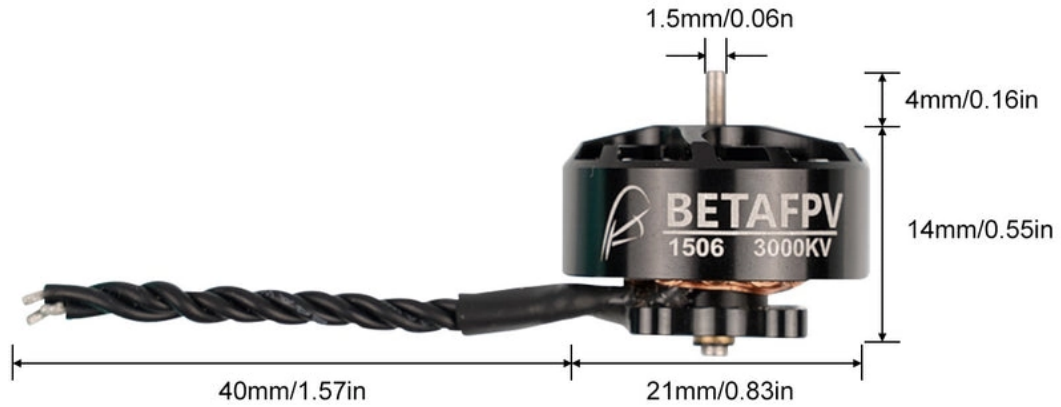

Powerful BETAFPV 1506 3000KV motor

The BETAFPV 1506 3000KV is a **brushless motor** that provides adequate power for dynamic flying. With its robust design and efficient use of power, it is a great choice for pilots who require precision and stability.

Power and efficiency - smooth operation

The BETA FPV 1506 3000KV motor offers **3000KV (rpm/V) speed** for dynamic acceleration and stable flight. With **a wide input voltage range** (3-6S), you have more flexibility in choosing a battery and adjusting the power to suit your flying style.

Lightweight design - greater maneuverability

With a weight of **only 14 g**, the motor does not weigh down the drone, which positively affects its maneuverability and flight time. **The 1.5mm shaft diameter** and **M2 mounting holes** make installation quick and hassle-free. Lightweight and efficient components allow for longer flights and greater control of the machine.
