Full product description

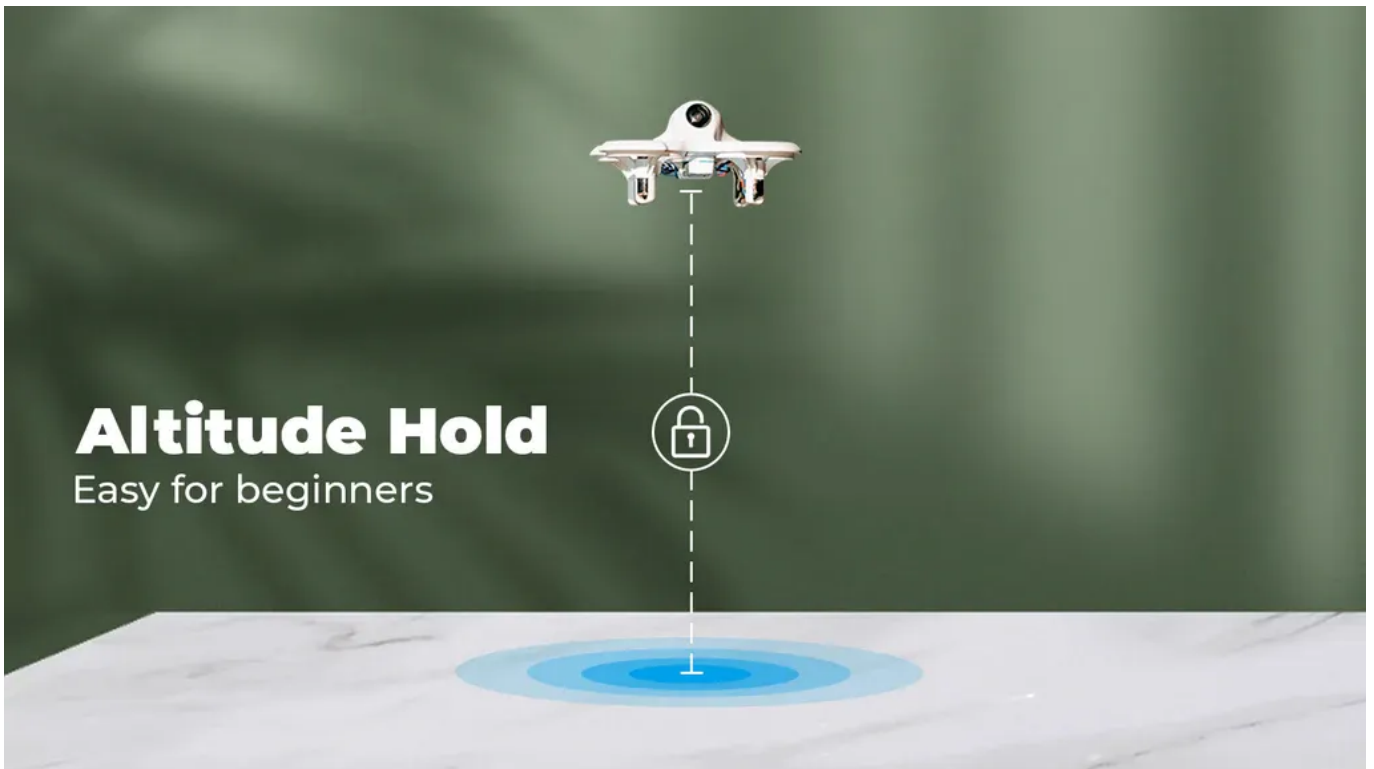

BETAFPV CETUS FPV Kit - your gateway to the world of FPV!

It's a complete beginner's kit that enables intuitive control while offering advanced features previously available only to professionals. It will allow you to experience true first-person perspective (FPV) flight in a way that is both simple and incredibly rewarding.

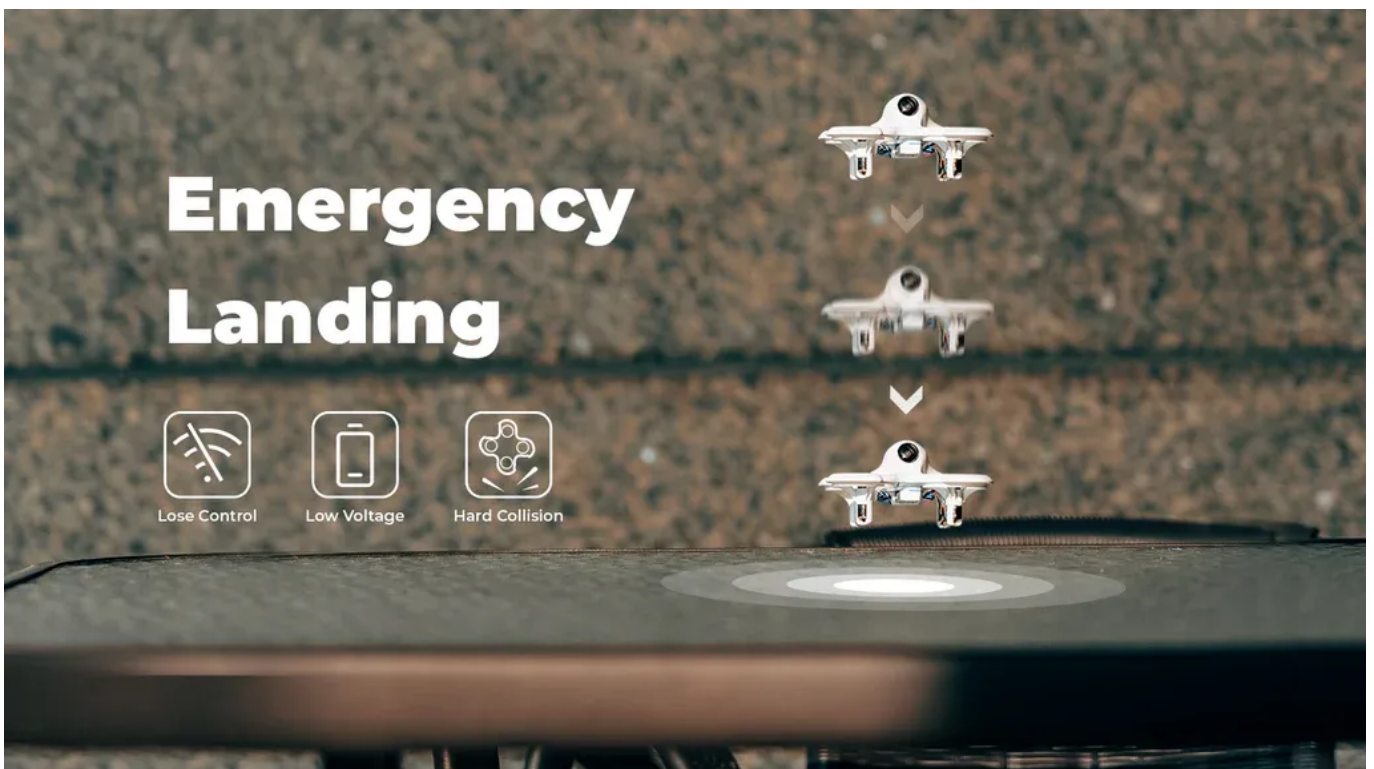

Maintaining altitude - easy for beginners

With its altitude hold function, the BETA FPV CETUS drone is **ideal for those just starting out in their flying adventure**. This mode allows you to fly steadily at a constant altitude, making it significantly easier to learn and control the drone. This is especially important when you want to focus on perfecting other piloting skills.

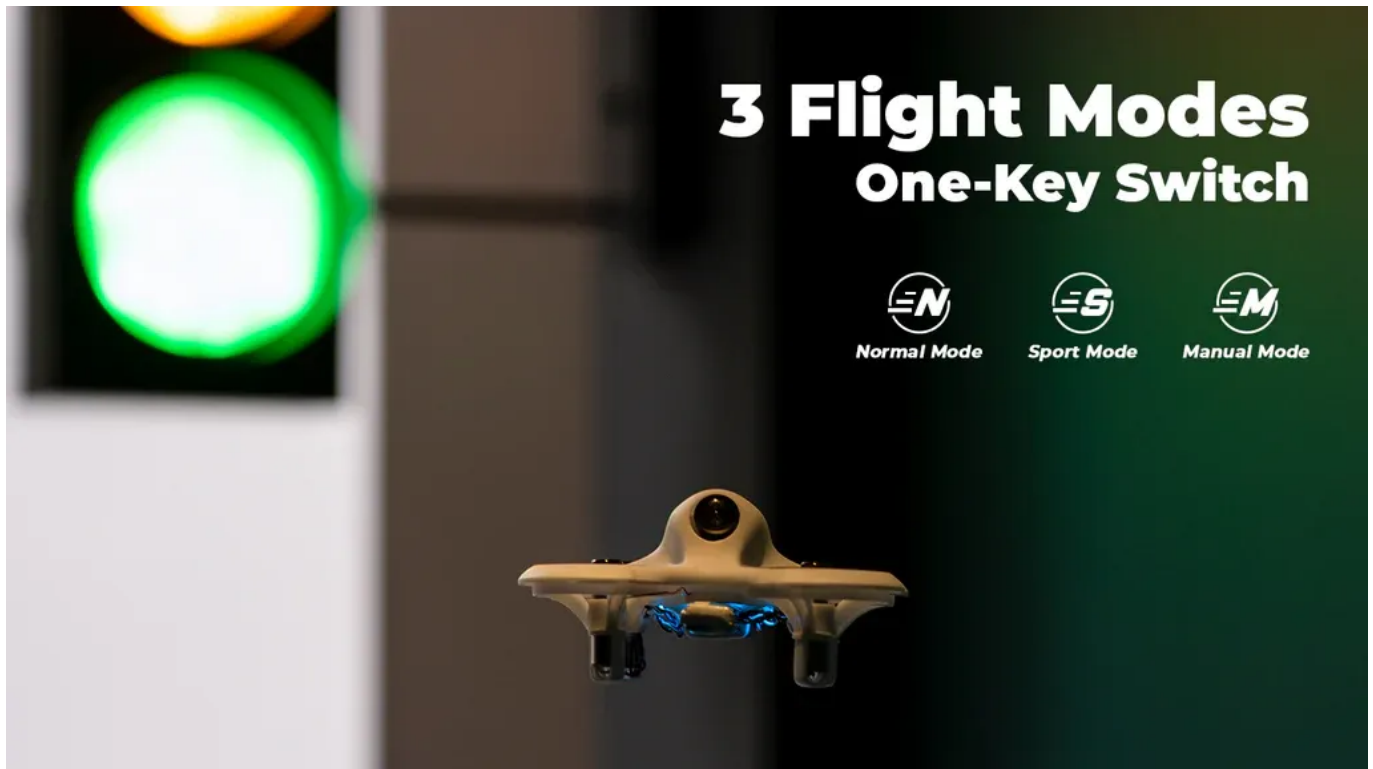

Safety first

The BETA FPV CETUS FPV Kit is designed with user safety in mind. Thanks to the automatic landing function, **the drone will land on its own** in case of loss of control, low battery voltage or collision. This solution means that even novice pilots can enjoy flying without worrying about damaging their equipment.

Three flight modes - perfect for any pilot

The kit offers three flight modes - **Normal, Sport and Manual**, which can be switched with a single click. Normal Mode is ideal for beginners, offering automatic altitude maintenance and simple control. Sport Flight Mode increases speed and responsiveness, ideal for intermediate users who want to feel more excitement. Manual Mode, on the other hand, is made for professionals, offering full control of the drone for the most advanced maneuvers.

First-person view, full immersion

The BETAFPV CETUS FPV Kit comes with VR02 goggles that offer a superior FPV experience. With a wide field of view and easy operation, you'll feel like you're piloting a drone yourself. The VR02 goggles provide crystal clear images for precise control and an even deeper immersion into the FPV world. The goggles are lightweight and comfortable, allowing for **prolonged use without discomfort**.
