Full product description

Lightweight BETAFPV CETUS FRAME

The BETAFPV CETUS FRAME is a design created specifically for the **Cetus** and **Cetus Lite** models. Thanks to its solid construction and lightweight design, the frame allows for precision flying and effectively protects the drone's components.

Lightweight design - longer flight time

The frame is made of durable plastic, which provides adequate protection without adding unnecessary weight to the drone. With dimensions of 90x85x45 mm, it maintains an optimal balance between stability and maneuverability in the air. The lighter design also means extended flight time, allowing for even more fun.
