Price: **79.00 zł** gross / 64.23 zł net

Manufacturer: BETAFPV

Referention number: DNXXGOPLHRMMMQ

Information:

BETAFPV CETUS PRO FRAME KIT is a lightweight and durable frame for dynamic flights, made from hard-wearing PA12 material. It weighs just 9,39 g, which ensures high agility, better manoeuvrability and a longer flight time. The 76,75 mm wheelbase guarantees stability and precise control even in tight spaces. The robust construction withstands impacts and stress well, making it suitable for intensive use.

Full product description

Durable BETAFPV CETUS PRO FRAME KIT frame

BETAFPV CETUS PRO FRAME KIT is a lightweight yet durable design, created with dynamic flights in mind. Thanks to the **high-quality PA12 material** and a well-thought-out structure, the frame can withstand numerous impacts and ensure stability in the air

Lightweight design - better manoeuvrability

The frame **weighs just 9.39 g**, which means the drone retains its agility and stays in the air longer. Thanks to the **76.75 mm wheelbase**, the structure remains stable while still allowing precise control even in tight spaces. It is a lightweight yet solid option for those who value precise control over flight.

Durable PA12 material - greater resistance

Made from **high-quality PA12**, the frame offers greater resistance to impacts and stress. This means that even after many intensive flights, the structure will retain its shape.
