Price: **89.00 zł** gross / 72.36 zł net

Manufacturer: BETAFPV

Referention number: DNXXGOPKMRMNGN

Information:

BETAFPV CETUS X FRAME is a durable drone frame made from impact-resistant PA12 material, which increases protection against damage and cracks even during aggressive flying and frequent crashes. The 94.75 mm design provides stability in flight, while the low weight of 24.22 g helps maintain lightness, manoeuvrability and better motor performance. It is a solid choice for pilots looking for a combination of durability, stability and dynamic performance.

Full product description

Durable BETAFPV CETUS X FRAME

BETAFPV CETUS X FRAME is a design that will meet your expectations! Thanks to its sturdy material and thoughtful design, this frame will allow your drone to survive even demanding maneuvers.

Take It to the Next Level

2S Power / Tilt Camera / 400mW VTX / ExpressLRS 2.4G / Betaflight Supported

Durable PA12 material - resistant to damage

The frame is made of **heavy-duty PA12 material**, which means more impact and shock resistance. This allows you to fly more aggressively without worrying about mechanical damage. It's a material that ensures long life and reduces the risk of breakage even with frequent falls.

Cetus X Brushless Whoop Frame

High-quality PA12 Material / Strong and Durable

Optimal dimensions - stability and lightness

The size of the frame - **94.75 mm** - guarantees the drone's stability during flight, while keeping the weight low. With a weight of **24.22 grams**, the frame does not put additional weight on the motors, which positively affects the flight time and agility of the drone. It's a great choice for pilots who want to strike a balance between durability and flight dynamics.
