Full product description

Garden watering can 5L - convenient watering of plants

The 5L garden watering can is a functional tool that makes it easy to water plants both in the garden and on the balcony. With a capacity of 5 liters, you don't have to refill water often, allowing you to water more plants efficiently. **Equipped with a strainer**, it ensures even distribution of water, protecting delicate leaves and flowers from damage.

Capacity that saves time

With a **5-liter capacity**, watering plants becomes more efficient. You can water larger areas without frequent refilling of water. This is a convenient solution for both small and larger gardens.

Strainer for delicate plants

A built-in strainer on the spout disperses the water stream, preventing damage to plants when watering. Better control of the stream ensures that the water reaches the roots instead of splashing on the leaves. As a result, **plants are watered evenly and efficiently.**

Sunlight-resistant design

The watering can is **made of durable plastic**, which is resistant to sunlight and changing weather conditions. It **will not fade or crack**, which means you can use it for a long time.

Lightweight and comfortable to use

Despite its 5-liter capacity, the watering can **is lightweight**, making it easy to carry and tilt while watering. The ergonomic **handle provides a firm grip**, making watering comfortable, even for longer gardening jobs.
