Full product description

Take care of your plants with a Black Forest sprayer

Black Forest sprayer is a practical equipment that allows you to **effectively protect plants** in the garden, on the plot or balcony. Thanks to the large capacity of the tank (16 liters), you don't have to worry about constantly refilling fluids - you can focus on performing precise protective treatments. The kit comes with **a funnel and nozzles** that allow you to adjust the intensity of the liquid spray, depending on your needs. Thanks to its **ergonomic design** and the use of resistant materials, the garden sprayer provides **long-lasting reliability** in harsh garden conditions.

Large capacity - convenient operation without frequent refilling

With a capacity of **16 liters**, the sprayer allows you to **apply for long periods** of time without having to fill it with liquids frequently. This allows you to focus on performing tasks in the garden without interrupting your work. The sprayer's capacity makes it the **perfect tool for larger gardens and plots**.

Pressurized system - precise application

The **pressurized system** allows you to accurately **spray liquids** at different intensities. The adjustable **working pressure** allows you to adjust the strength of the spray, so you can use it for both **gentle spraying of plants** and intensive **spraying of larger areas**.

The backpack design with adjustable shoulder straps allows **the sprayer** to **be carried comfortably** for extended periods of time. By distributing the weight evenly on the back, the sprayer does not weigh down the body, reducing **fatigue and discomfort**.

Durable materials - long-lasting durability

The sprayer is made of **high-quality plastics** (polypropylene, polyethylene) to ensure resistance to chemicals and mechanical damage. These materials are also **UV-resistant**, ensuring that the sprayer will not lose its properties even after prolonged use in the sun.
