Full product description

Switch from Cambium Networks cnMatrix TX series

The **cnMatrix TX** provides wireless ISPs with a non-blocking, fully managed portfolio of enterprise-class L2/L3 switches, a flexible and intelligent PoE solution in a single form factor that is easy to install and manage while improving network performance.

A fully integrated switching solution **designed for WISPs** that simplifies deployment operations and improves network performance. Integrated with **Cambium's** full portfolio of connectivity solutions and managed using the cnMaestro cloud-based management system. Designed around the specific needs of wireless ISPs.

- Non-blocking architecture (Full Line Rate)

- Easy and simple, free cloud (or on-premises) management with cnMaestro™ or XMS*
- Zero-touch switch deployment simplifies installation
- Policy-based automation eliminates manual and time-consuming configuration
- Enhanced security with automated device profiling and segmentation
- Policy-based automation eliminates manual configuration when adding, moving or changing network devices
- Unified solution for wired and wireless access

- **802.3af/at/bt** - up to 90W
- **Passive PoE 24V** - up to 15W
- **Passive PoE 54V**
- up to 90W

The fully managed cnMatrix Series switches provide full Layer 2 and Layer 3 capabilities and enhanced access security. The **cnMatrix series** offers flexibility with **SFP (10 Gbps) or SFP (1 Gbps) uplink** ports . These switches are backed by a 3-year limited warranty.
