Price: **1,674.60 zł** gross / 1,361.46 zł net

**Cambium Networks™**

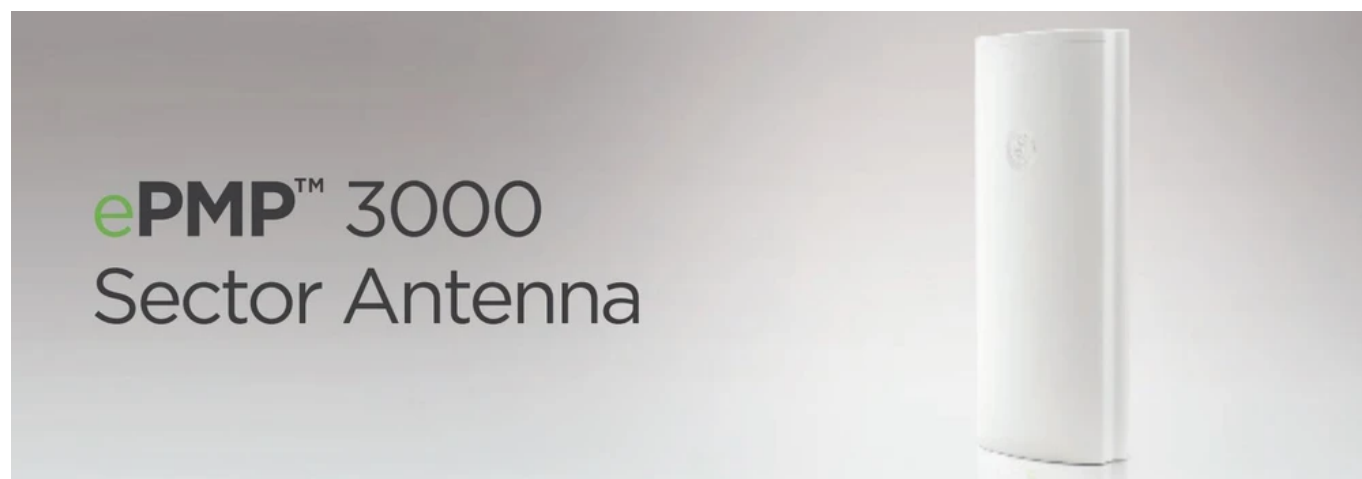

Manufacturer: CAMBIUM

Referention number: DNXGFNLMMRMOK

### Full product description

### World-class sector antenna CAMBIUM EPMP 4x4 MIMO

Cambium Networks has deployed over five million radio devices worldwide, achieving unprecedented levels of scalability. Continuing the tradition of designing and manufacturing industry-leading antenna solutions, **Cambium Networks ePMP 3000 4X4** sector antenna combines all the key innovations in the Cambium antenna lineup with the addition of 4X4 Multi User MIMO support. This antenna has been designed to operate in 5 GHz band and 90 degree propagation. It is an integral part of Access Point ePMP 3000 and supports multiple MIMO users.

### Key benefits

- Re-use of frequencies: designed to reuse the ABAB channel (two channel coverage, four sectors). The sector antenna has a minimum gain of 17 dB and propagation over a wide 90 degree radiation angle.
- Antenna selectivity: a constant gain of 4.9 to 6.0 GHz allows the operator to select a channel in any band and achieve the desired performance.
- Consistent coverage: the excellent ability to fill the antenna allows a large geographical area in the sector to be covered, both at the base of the antenna mast and near the edges of the sector.

- Designed for easy mounting: small, compact design, integrated ePMP antenna holder and the possibility of integration with a GPS antenna.
- Predictable performance: the sector antenna is available for designers in the Cambium LINKPlanner programme. The 3D model shows the range at all altitudes and latitudes.
