Full product description

6 GHz 2x2 25 dBi disc antenna compatible with Force 4600C

The **Cambium ePMP™ 6 GHz 2x2 25 dBi Dish Antenna** is a dish antenna designed specifically **for the 6 GHz band** to provide high performance and scalability for **point-to-multipoint (PMP)** wireless networks. This antenna is ideal for network operators who want to take advantage of the wide spectrum and low interference in the 6 GHz band.

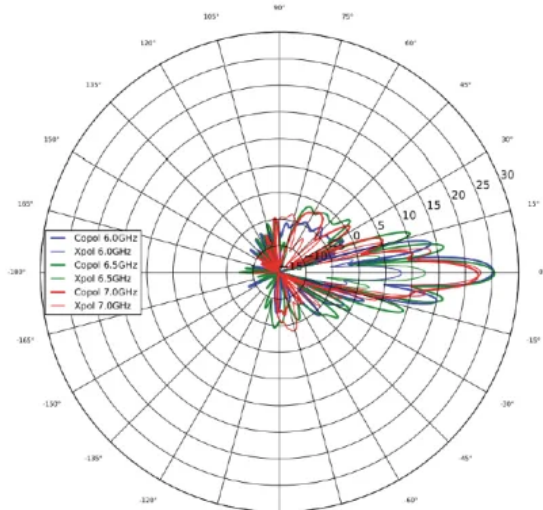

Key implementation advantages

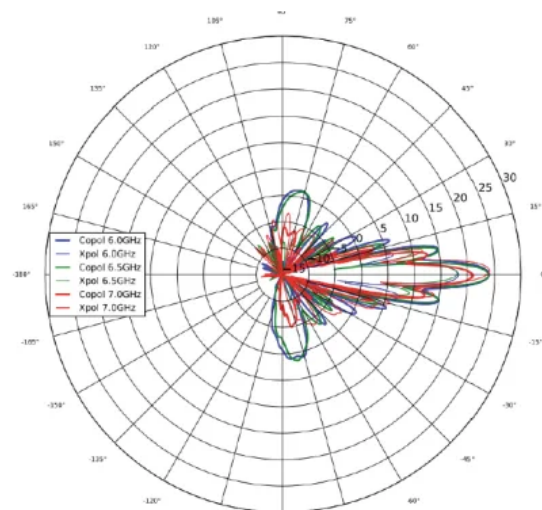

Maximize efficiency

These antennas are designed specifically for the 6 GHz band. In addition to frequency coverage, a key advantage is to concentrate more gain in the main beam while minimizing side lobes in the propagation pattern.

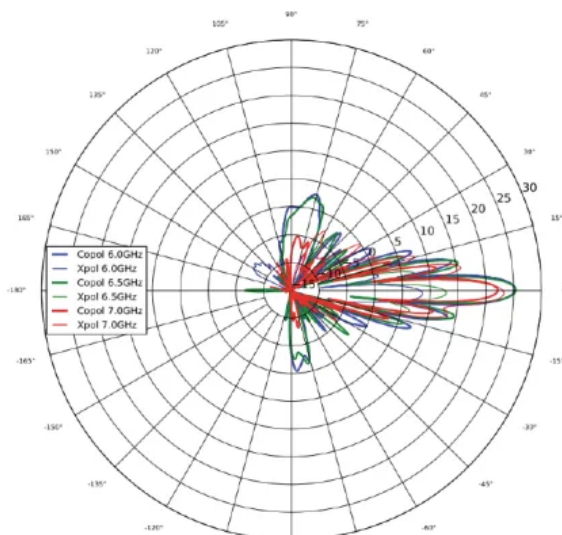

Azimuth, Horizontal

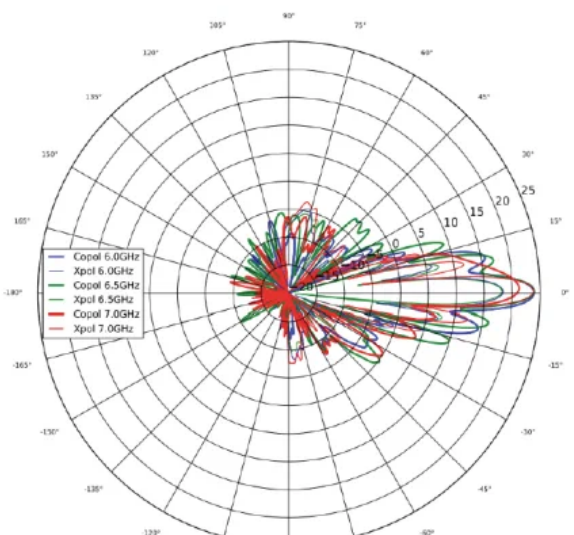

Azimuth, Vertical

Elevation, Horizontal

Elevation, Vertical

Compatibility with Force 4600C

The antenna operates in the 6 GHz band and provides 7° beam coverage. To simplify installation, the antenna comes with the mounting bracket needed for pole mounting and the cables needed to directly connect the antenna to the Force 4600C subscriber module.
