Full product description

EPMP™ Force 200 - designed to operate in highly disturbed environments

EPMP™ Force 200 5 GHz adds a subscriber module and point-to-point radio to the 5 GHz ePMP product line with a guarantee of excellent throughput of over 200 Mbps of actual user data. Long range deployment is possible with a 25 dBi antenna. Configurable operating modes enable reliable adaptation to both symmetric and asymmetric traffic, while providing high performance and extremely low latency of 2-3 ms both ways.

Integrated ePMP Force 200 solution

The device increases range and improves throughput in the most congested environments. **ePMP Force 200** is a completely redesigned **Cambium Networks** solution that combines highly integrated and efficient radio with a high gain antenna. The radio supports **Gigabit Ethernet** interface for maximum throughput. Operating in the **2.4 and 5 GHz** frequency ranges, it provides customers with wireless broadband connectivity over longer distances and excellent return on investment.

Distinguishing features of the ePMP Force 200 product from Cambium Networks

- Device designed to operate in a highly disturbed environment with the highest quality and throughput of over 200 Mbps
- QoS (Quality of Service) management offering exceptional quality triple play services (VoIP, video and data) with three traffic levels
- Possibility to configure the platform as a subscriber module or a high gain PTP (point to point) radio
- Long operating range thanks to high gain antenna with 30 dBm transmission power
