Information:

Extralink Rack Enclosure is a durable and practical solution for the safe storage and organisation of network and server equipment. Made from cold-rolled steel sheet, it provides high resistance to damage and stability even under full load. Its robust construction makes it ideal for both offices and professional data centres, offering reliable protection for equipment over a long period of time.

Full product description

Extralink Rack enclosure - a solution that will provide optimal protection and organization of your equipment.

Rugged construction and thoughtful details make it ideal for both offices and professional data centers.

Robust construction

Extralink Rack enclosure is made of cold-rolled steel sheet, which provides exceptional durability and resistance to damage. The outer walls made of this material guarantee the stability of the structure, even when fully loaded. Thus, you can be sure that **your equipment will be safe for many years of use.**
