Full product description

Improving the functioning of the network

Cambium Networks CnMatrix Network Switches provide high performance (**high performance**) of a wired/wireless **class corporate** network with free, easy-to-use cloud management that ensures reduced errors and shorter network downtime.

Cambium Networks cnMatrix EX2028-P - 28-port Gigabit Ethernet switch

The **cnMatrix EX2028-P** network switch has **24 10/100/1000Mb/s** and **4x SFP+ uplink ports**. Thanks to the rack type housing, the device is adapted to be mounted in a rack. The equipment allows for easy **expansion of Ethernet throughput** to gigabit connections. All 24 ports support **PoE switch** power supply, so power supply is provided via Ethernet cable, so **there is no need to pull additional cables** to devices connected to the switch.

Automatic machine segmentation and cleaning

Ethernet switch **EX2028-P** automatically profiles and places devices in the appropriate network segment, providing a **secure environment** for key network resources, devices connected to the building network will not have access to the corporate financial network. All related dynamic configurations are automatically deleted when the device is disconnected.

Affordable Unified Wired/Wireless network managed in the cloud

Cambium Networks **simplifies network operation** thanks to global communication systems. Our corporate, cloud-managed intelligent network solution **increases network resilience, facilitates network operation, improves performance and flexibility**, providing operators with cost-effective wired/wireless connections. The entire end-to-end network is managed using the **free** management system **cnMaestro**.

Cambium Networks

Advantages for businesses

- Reduce network configuration errors by eliminating unreliable manual configuration
- Non-contact initial implementation for time and cost savings

- Centralised management and common procedures within the network to reduce problem solving time
- Significant improvement in safety thanks to automatic segmentation of devices
- Undisturbed local system operation even when the connection to the cloud is lost
- Reduce total system cost by using affordable cnMatrix switches managed by a FREE cnMaestro controller
