Full product description

Efficiency and convenience of use

Ceramic gas burner is a device that combines functionality and convenience, ensuring efficient and safe operation. Powered by propane-butane or butane gas, it is easy to use - just mount it on a gas cartridge and you're ready to go! Thanks to the **piezoelectric igniter**, starting the burner is quick, and the firing process - safe and convenient.

High operating temperature

It features a maximum operating temperature of up to **1,300°C**, which allows for precise soldering, defrosting, as well as tanning and paint removal. Its exceptional power makes it an ideal tool for demanding tasks, such as lighting barbecues and fireplaces.

Precise flame control

With a valve that allows **infinitely variable flame control**, you will adjust the intensity of the burner to suit your needs. Whether you need a gentle flame for precision soldering or a strong flame for quick warm-ups, the gas burner will meet your needs.

Ergonomic and comfortable to use

The gas burner has an **ergonomic handle** that provides comfort and convenience while protecting your hands from heat. Its light weight and compact size (18.2 x 10.5 x 18 cm, weight: 197 g) make it an extremely handy tool that is easy to take with you wherever you need it.

High quality and economy

Thanks to the use of high-quality materials, the gas burner is characterized by high durability and reliability. It is also economical in use - gas consumption is only **88 g/h**, which allows for long-term and efficient use.
