### Product features

|                                        |                                   |
|----------------------------------------|-----------------------------------|
| Height                                 | 44 mm                             |
| Width                                  | 280 mm                            |
| Depth                                  | 170 mm                            |
| Mean time between failures (MTBF)      | 205647 h                          |
| Packet buffer memory                   | 12 MB                             |
| Input current                          | 1.5 A                             |
| Power consumption (typical)            | 13 W                              |
| Switching capacity                     | 20 Gb/s                           |
| Flash memory                           | 256 MB                            |
| Heat dissipation                       | 289 British thermal unit per hour |
| Total Power over Ethernet (PoE) budget | 62 W                              |
| Processor frequency                    | 800 MHz                           |
| MAC address table                      | 16384 entries                     |
| Internal memory                        | 512 MB                            |
| AC input frequency                     | 50 Hz                             |
| AC input voltage                       | 110 V                             |
| Product weight                         | 1190 g                            |

### Full product description

#### Cisco SG350-10P - 10-port Smart Gigabit Ethernet switch, 350 series

The **SG350-10P** switch is equipped with **10 RJ45 ports with a throughput of 1000 Mb/s** and **two Gigabit Combo (RJ45/SFP)** ports. The switch can be powered by PoE through the uplink ports. To manage and configure the device are used, among other things, **Graphical Web**

interface and CLI text console.

## Safety above all

Thanks to **advanced security features, PoE, QoS, VLAN and access control functions** the presented **switch SG350-10P** allows users to easily and securely connect their computers to all devices, servers operating in the network. The switch has a bandwidth of 14.88 million packets per second (64-byte packets) and a switching capacity of 20.0 Gb/s. The product comes with a limited, lifetime manufacturer's warranty. The device is designed for **small offices**.

## Cisco Switches, 350 series

The Cisco 350 series is part of the network solutions included in **Cisco Small Business**. It is a line of attractively priced managed switches, which are the base for business networks. They provide information in a more efficient way, provide features that improve the availability of business applications, protect confidential data and optimize network capacity. Easy to set up and use, the affordable Cisco 350 series enhances capabilities and helps create more efficient computer networks, especially for small businesses.

Cisco 350 Series is a wide range of manageable Ethernet switches. The models in this series are equipped with **8 to 48 Fast Ethernet ports and 10 to 52 Gigabit Ethernet** ports. They provide companies with the optimum flexibility they need to build a solid network foundation. The **Cisco 350** series switches support advanced security management and network functions for sensitive business data. They are easy to deploy and configure, making it easy to use the network services that every business needs.

- Secure wireless connectivity - With advanced security features, Power over Ethernet, Auto Smartports, QoS, VLAN, and access control, the Cisco 350 Series switches are the perfect foundation for building a business-class wireless network.
- Unified communication - As a managed network solution, the Cisco 350 series provides performance and advanced traffic management technology when delivering communication and data over a single network. Cisco offers a full range of IP telephony and other unified communications products for the enterprise. The Cisco 350 series switches have been rigorously tested to ensure easy integration and full compatibility with multiple products to provide comprehensive business solutions.
- Highly secure guest connectivity - The Cisco 350 Series allows you to extend secure guest connectivity in a variety of configurations, such as a hotel, office waiting room or other open area for unattended users. With powerful but easy-to-configure security features and traffic segmentation, you can isolate business traffic from guest services and keep your network sessions private.
- Securely connect computers - Cisco 350 Series switches can easily and securely connect small office staff, all servers, printers and other devices used by employees. High performance and reliable connectivity help speed up file transfer and data processing, increasing uptime on the network and maintaining constant contact between employees.
