Price: **6,290.47 zł** gross / 5,114.20 zł net

Manufacturer: CISCO

Referention number: DNXGFPLQIRMMPI

Product features

Height	28 mm
Width	440 mm
Depth	257 mm
Mean time between failures (MTBF)	248097 h
Packet buffer memory	3 MB
Power consumption (max)	52 W
Switching capacity	176 Gb/s
Flash memory	256 MB
Performance	130.94 Gb/s
Heat dissipation	177.43 British thermal unit per hour
Processor frequency	800 MHz
MAC address table	16000 entries
Internal memory	512 MB
AC input frequency	47 Hz
AC input voltage	100 V
Product weight	3730 g

Full product description

Cisco SG550X-48 - 48-port Gigabit switch with 10 Gb/s uplink ports and Stackable Managed Switch - 550X Cisco Series

The **Cisco SG550X-48** switch is equipped with **48 ports with a throughput of 1000 Mb/s**, as well as **2 Combo 10G RJ45/SFP+ ports and 2 SFP+ ports**. The Cisco switches are managed and configured using, among others, a graphical user interface available through a web browser

and a text CLI console.

Top-level performance

The switch has a throughput of **130.94 million packets per second (64-byte packets)** and a switching capacity of **176 Gb/s**. The Cisco switch comes with a limited, lifetime manufacturer's warranty.

Physical stacking of Cisco 550X series switches

Unlike stackable switches that have components that are administered and diagnosed separately, the **Cisco 550X** series provides a real, end-to-end stacking of switches, allowing you to configure, manage and troubleshoot multiple switches as if they were a single device, making network expansion much easier.

Why Cisco? Features and benefits of the 550X series switches

High performance 10 Gigabit Ethernet ports The **Cisco 550X** series switches are equipped with 10 Gigabit Ethernet ports, providing affordable and flexible configurations to meet the high networking requirements of small and medium enterprises. The 10G copper ports in the SX550X switches allow connections to servers and network storage devices using standard RJ-45 Ethernet cable.

Easy implementation and use The **Cisco 550X** series switches are designed for small and medium enterprises. They are extremely easy to use and manage.

550X Series Switches - key features

- **Smart Network Application (SNA)** is an innovative network level monitoring and management tool built into the **series Cisco 250 to 550X** switches. It provides the ability to display network topology, display connection status, monitor events, deploy configurations and update software in multiple switches on the network.

- **FindIT Network Manager and Probe** are designed to manage switches, routers and wireless access points from the Cisco 100 to 500 series. They not only react to events, but allow proactive network management. The **Cisco 550X** series switches support the built-in FindIT Network Probe, which eliminates the need to configure separate hardware or a virtual machine on site. **For more information, visit the manufacturer's website:** [Cisco - FindIT Network Manager and Probe](#)

- The **FindIT Network Discovery** tool works with a simple toolbar in your web browser that allows you to discover Cisco devices on the network and display basic device information, inventory and new firmware updates, helping you configure and speed up the deployment of **Cisco Small Business** products.

- The advanced but easy-to-use graphical user interfaces reduce the time needed for deployment, troubleshooting and network management, and allow for convenient use of advanced features.

- Configuration wizards simplify the most common configuration tasks and are a great tool for easy network configuration and management.

- The switches also support **Command-Line Interface (CLI)** text interface.

- With **Auto Smart** ports, the switch detects a network device connected to any port and automatically configures optimal security, quality of service (**QoS**) and availability on that port.
- **The Cisco Discovery** Protocol detects Cisco devices and allows them to share key configuration information to simplify network configuration and integration.
- Support for **SNMP (Simple Network Management Protocol)** allows you to configure switches and other Cisco devices and manage them remotely, making the IT department more efficient and facilitating mass configurations.
- **The USB port** in the switch provides easy transfer of images and configurations, shortening the implementation or upgrade time.
- **Networkwide Automatic Voice Deployment** - Using **Cisco Discovery Protocol, LLDP-MED, Auto Smartports and Voice Services Discovery Protocol** (VSDP- the Cisco Unique Protocol), Customers can dynamically deploy an end-to-end voice network.
