Full product description

EXTRALINK Powerful Russian Pump 600W for Clean and Dirty Water - Submersible.

Robust Design and Performance The EXTRALINK 600W pump is a device designed for heavy use, both for clean and dirty water. Thanks to its reinforced construction, which is based on high-quality materials such as aluminum housing, the pump is resistant to mechanical damage, while being lightweight and easy to carry. The use of an electromagnetic motor makes it possible to achieve high performance with a relatively small size of the device. These features make the pump ideal for harsh conditions, including well or room drainage applications.

Security and Safety

The pump is equipped with a number of protective features that ensure the safety of both the user and the device itself. Built-in thermal protection protects the motor from overheating, automatically shutting down the unit when the temperature of the motor windings exceeds an acceptable level. Once the temperature drops below 50°C, the pump restarts, ensuring reliable operation. This solution means that the device can operate for long hours without worrying about damage caused by overheating.

Performance and Water Lifting Capacity

The EXTRALINK 600W pump is characterized by excellent technical parameters that allow it to effectively lift water up to 90 meters. With a high capacity of 1,400 l/h, the pump excels in demanding tasks such as pumping water out of flooded rooms, wells or swimming pools. Despite its small size, the device can handle particles up to 1 mm in size, making it a versatile solution for both clean and contaminated water.

Simple Operation and Assembly

Mounting the pump is extremely easy thanks to the built-in screw-mounted suction valve, which allows the unit to be quickly and stably connected. It also comes with a hose clamp and mounting cord for easy lowering and use. A 3/4" diameter hose outlet ensures compatibility with a wide range of hoses, making the pump extremely versatile. Thanks to its lightweight design and easy handling, the pump is ready for use almost immediately out of the box.

Reliability and Durability

EXTRALINK 600W pump is a device designed for long-term reliability. The body made of aluminum not only provides lightness, but also excellent resistance to corrosion and mechanical damage. The use of a 600W motor, protected against overload, makes the pump capable of handling

even the most demanding tasks. Combined with its robust design, this pump is a real "hero" for special tasks, offering reliability, performance and longevity for many years.
