Referention number: DNXGGOMQERMMMI

Information:

The BN-445 Christmas LED Laser Projector is a quick way to create an eye-catching snowflake-themed decoration for the home, garden, balcony, terrace and selected interiors. It illuminates an area of approx. 20-30 m² from a distance of 5-10 m, allowing you to decorate a larger space without many lights. It is easy to install, and the included remote control enables convenient remote operation. The IP65 housing protects against dust and water jets, making the projector suitable for outdoor use even in winter conditions, at temperatures from -25°C to +40°C.

Full product description

Festive projection for home and garden

The BN-445 LED Laser Christmas Projector makes it quick and easy to create a light display with a snowflake motif. It can be used to illuminate the façade of a house, balcony, terrace, garden, and selected indoor spaces. The projection covers an area of approximately 20-30 m² when the device is positioned 5-10 metres away, helping to decorate a larger surface without hanging lots of individual lights.

Simple installation and remote control

Preparing the projector for use is limited to placing it in the right spot, aiming it at the chosen surface, and connecting it to a power supply. The included remote control allows convenient operation of the projection from a distance, without having to go up to the device each time. This solution makes operating the festive illumination convenient both when decorating the home and the garden.

IP65 housing for outdoor use

The IP65 protection rating means the projector can also be used outdoors, where the device may be exposed to dust and water jets. The operating temperature range from -25°C to $+40^{\circ}\text{C}$ allows it to be used in winter weather conditions. Thanks to this, the BN-445 projector can create a decorative snowflake projection on the façade even during cold festive evenings.
