Full product description

DELL S2721DGFA

This is a **27-inch gaming monitor** with high **sRGB** space coverage so you can enjoy vivid and saturated colors. High maximum brightness allows you to view a clear image in strong daylight .

Stunning speed

Thanks to the built-in **IPS (In-Plane Switching)** technology, you will notice amazing speed and exceptional color quality from any angle. With an **ultra-fast refresh rate of 165Hz**, we can enjoy incredibly smooth images and faster perceptions and thus faster response times. With a low response time of **1ms**, the effect of motion blur is eliminated. And then there are the **Nvidia G-Sync** and **Amd FreeSync** technologies, which eliminate the effect of screen tearing and stuttering.

Vivid details

With 98% coverage of the DCI-P3 color palette and **1.07 billion colors**, every gameplay experience delivers vivid colors and incredible depth, all at a stunning **QHD (2560 x 1440)** resolution. This monitor **is compliant with the VESA DisplayHDR™ 400 standard**, so you can see more detail and color than on an SDR display - providing incredible clarity and high contrast for highly realistic graphics.

Cleverly designed

The gaming-oriented design emphasizes crisp looks and gaming features that give us practical and aesthetic benefits.

- **Unique design:** The ventilation holes at the back of the case are designed to dissipate heat
- **Appropriate stand:** Play comfortably for long periods of time with a thin, tapered stand with adjustable tilt and height. The space-saving base allows us to place more gaming accessories.
- **Thin bezel:** With an ultra-thin bezel, you can play with minimal distractions on a larger surface.
- **Customizable Pros:** Three user-defined profiles provide even more personalization options. Timer, frame counter and darkness stabilizer allow for comprehensive management - from frame count to brightness to shadows.
- **No flicker**

: DC brightness control keeps the screen flicker-free for comfortable viewing. In addition, the ComfortView function reduces the harmful effects of blue light on the eyes, significantly reducing the effect of digital eye strain.
