Full product description

Electric Dryer 600 Watt - Efficient Drying at Home and on the Go.

The **600-watt** electric dryer is a functional device for everyday use. Its small size and foldable design make it suitable both at home and while traveling. **PTC** technology allows even heat distribution, which protects fabrics from overheating and allows you to get dry clothes in a short time. The device requires no assembly - it is ready to use when unfolded, and takes up very little space when folded.

Two Speed and Time Settings

The dryer has **two levels of drying speed** and a **built-in timer** that allows you to choose the operating time - **1, 2 or 4 hours**. Such a solution allows you to adjust the mode according to the type of material and number of clothes. Energy consumption is low - less than **1 kWh per hour** - which reduces operating costs and promotes economical use. When the cycle is complete, the device automatically shuts off, which increases convenience and safety of operation.

UV Disinfection and Silent Operation

In addition to drying clothes, the dryer uses **UV light** to promote disinfection. This function helps reduce the growth of bacteria and removes unpleasant odors from fabrics. During operation, the device generates a sound of about **45 dB**, so it can be used even at night. The combination of heat and UV light allows drying and refreshing clothes in one cycle.

Durable and Lightweight Construction

The dryer is made of a combination of **ABS plastic and metal**, which increases its durability. Weighing only **1.05 kg**, it can hold a fair amount of clothing. Depending on your needs, you can dry **10 to 20 pieces of underwear**, **8-10 shirts**, **3-6 sweaters** or **16-20 towels**. The unit is compact, and the warm air is distributed evenly, which reduces drying time even with more clothes.

Thermal Protection and Safe Operation

The **PTC (Positive Temperature Coefficient)** technology used allows the dryer to maintain a constant temperature during operation. In addition, the device is equipped with a **double safety system**, which shuts down the dryer in case of overheating. This solution protects the user and clothes, eliminating the risk of damaging fabrics and overheating the housing.

Mobility and Easy Storage

The unit is distinguished by its **folding design**, so it can be quickly folded and stored in a closet, under a bed or on a shelf. **The wavy arrangement of the hooks** makes it easier to hang clothes evenly, which speeds up airflow and reduces drying time. The compact size (**125 x 41 cm when unfolded / 22 x 14 cm when folded**) makes the dryer fit even in limited space and is convenient to carry.
