Full product description

Fiber optic splitter with SC/APC 1:2 connector T1550NM R/1310/1490 STEEL TUBE 0.9 mm

Fiber optic splitters are used in FTTH networks, where the Internet is delivered to the customers by means of an optical fibre led from the server room to the customer's device without changing the transmission medium. The specificity of this technology requires that the signal is distributed to the clients without using additional active devices.

FWDM (Filter-based WDM) splitters are built in TFF (Thin Film Filter) technology. They are characterized by high interwave insulation, high temperature stability and low attenuation.
