Full product description

Discreet and Efficient Wall-Mounted Tablet Power Supply - Extralink AC-USBC Adapter

Looking for a solution to aesthetically and functionally power tablets in wall-mounted installations for commercial, educational and residential applications? The Extralink AC-USBC power supply is a compact unit that combines high power and discreet mounting. Provide continuous power for Apple iPad, Samsung Tab, Microsoft Surface and other USB-C compatible tablets, while keeping your installation neat and aesthetically pleasing.

Aesthetics and Functionality - Wall Box Mounting

The Extralink AC-USBC power supply is designed for integration into wall-mounted installations. Its small size allows it to be hidden in a standard installation box - both US (US gang box) and European (EU wall box). Thus, once the tablet is mounted on the wall, the power supply remains completely invisible, eliminating the problem of tangled cables and unsightly adapters. The flush mount solution guarantees a clean and professional installation, ideal for commercial, educational and home applications where aesthetics play a key role.

Power and Versatility - USB-C Power Delivery

Despite its compact size, the Extralink AC-USBC power supply delivers up to 30W of power. It supports the Power Delivery (PD) standard, automatically adjusting the output voltage and current to meet the needs of the connected device. It offers a wide range of output voltages: 5V/3A, 9V/3A, 12V/2.5A, 15V/2A and 20V/1.5A, ensuring compatibility with a wide range of devices with a USB-C port. Whether you're powering an iPad, Android tablet or Surface, the Extralink AC-USBC will deliver a stable and efficient power supply.

Simple and Safe Installation - Solutions for Professionals

Installation of the Extralink AC-USBC power supply is quick and intuitive. The power supply comes with AC power cables of about 140mm in length and a USB-C female connector. It also comes with WAGO (reusable wire nuts) connectors, which allow the power cables to be quickly and securely connected without the need for tools. Class II 1500V insulation provides a high level of user safety, protecting both the installation and connected devices from surges and interference. This solution will be especially appreciated by installers for whom installation time and safety are a priority.

Compact Design - Maximum Functionality in a Small Case

The Extralink AC-USBC power supply features an extremely compact design measuring just 49 x 50 x 27 mm. Such a small size allows the power supply to be easily placed in a standard installation box without worrying about lack of space. As a result, the power supply is virtually invisible after installation, which is especially important in places where aesthetics and minimalism are important.
