Manufacturer: EXTRALINK

Referention number: DNXGGMIOIRMMKI

Information:

Extralink Beauty X7 Max is a 180 W UV LED lamp for curing hybrid polishes, UV gels and other light-curing products. It provides even exposure thanks to the LEDs placed inside, which speeds up and makes manicure easier at home and in the salon. It has a practical carrying handle, a compact design, a wide opening for the whole hand and a stable base. A 10, 30, 60 and 99 second timer with a clear display lets you adjust the operating time, and an automatic motion sensor switches the lamp on when the hand is inserted, increasing ease of use.

Full product description

UV LED lamp with 180 W power

Extralink Beauty X7 Max enables curing hybrid nail polishes, UV gels and other light-curing products. The 180 W power and the diodes arranged inside help to illuminate the nails evenly, making manicure work easier at home or in a beauty salon.

Practical carrying handle

The integrated handle makes it easy to lift and move the lamp between workstations. The compact design means the device can be conveniently placed on a beauty desk, manicure table or stored away after styling.

For home and salon manicures

The lamp is suitable for hybrid and gel manicures both at home and in a beauty salon. The wide opening allows the whole hand to be placed comfortably inside, while the stable base helps maintain the correct position when curing successive layers of the style.

Timer and clear display

The control panel offers 10, 30, 60 and 99 second time programmes, allowing the exposure time to be matched to the type of product used. The digital display makes it easy to monitor the time remaining until the end of the process, and the 99 second mode uses gradual heating.

Comfort during every styling session

Simple operation helps you carry out each stage of the manicure efficiently. The appropriately contoured interior provides space for the hand to rest freely, so the lamp can be used during a stylist's daily work as well as for independent nail care.

Automatic motion sensor

The built-in sensor detects when a hand is inserted and automatically switches the lamp on, reducing the need to turn the device on manually. When the hand is removed, the light switches off, contributing to more convenient and smoother work during nail styling.
