Full product description

Meet the Extralink BN20 - Innovative Portable Charger for Electric Vehicles.

The Extralink BN20 is the latest in EV charging technology, designed with the dynamic EV user in mind. This portable charger is compatible with 110/230V nominal voltage (level 2), ensuring its functionality in a variety of electrical systems and geographic locations. With 50/60Hz frequency adaptation, the BN20 is ideal for both residential and commercial users.

Optimal charging performance

The Extralink BN20 has a maximum output power of 3.6 kW (240V AC * 16A), which enables efficient and fast charging of electric vehicles. This power is ideally suited to the needs of fast yet energy-efficient charging, which is a perfect solution for both private and professional needs.

Single-phase AC power supply

The charger accepts single-phase AC 230V power, which emphasizes its energy efficiency and compatibility with standard home and commercial electrical installations. The use of a current range of 0 to 16A further emphasizes the flexibility to adapt to different power conditions.

Safety first

Designed with a three-wire power system - L1, PE, N - the BN20 charger guarantees a safe and reliable connection. This commitment to safety and reliability is central to Extralink's products, making the BN20 a sure choice for anyone looking for an effective and safe EV charging solution.
