Full product description

Extralink BN30 Charging Station - Reliability and Flexibility

The Extralink BN30 is an electric vehicle charging station that combines modern technology and convenience. Equipped with a dedicated mobile app, it allows easy and secure management, making it ideal for both private and public use.

Two charging power options

With a choice between 7.2 kW and 22 kW, the BN30 station is able to meet both standard and more demanding charging needs. It offers a maximum capacity of up to 22 kW, which significantly speeds up the charging process, which is especially important in public and commercial areas.

Compatibility and Compatibility

The Extralink BN30 charging station is compatible with a variety of electrical systems, supporting both 230/380V and 50/60Hz frequency. This versatility makes it an excellent choice for a variety of locations and power systems, increasing its appeal in the market.

Long and Practical Charging Cable

Ideal for both home and public areas, the Extralink BN30 meets the needs of the most diverse users. Thanks to its easy operation and personalized access via an app, the station is user-friendly and easy to manage. Choosing the Extralink BN30 charging station is an investment in the future, offering not only fast and efficient charging, but also flexibility and customization for each user.
