Information:

Extralink BS30 is a wall-mounted electric vehicle charger with a power output of 22 kW, providing fast and efficient charging. Equipped with RFID technology, it allows access only to authorised users, which increases safety and makes it ideal where the device is used by multiple people. The robust ABS+PC housing guarantees durability and reliability, while the full set of protections safeguards operation. The charger is easy to install, weather-resistant and designed to operate all year round, even in challenging weather conditions.

Full product description

Extralink BS30 22kW electric car charger with RFID

Introducing the perfect solution for electric car charging - our **Extralink BS30 EV wall charger with RFID**. With an impressive **22kW of power**, this charger guarantees fast and efficient charging, allowing you to get back on the road quickly. It is **easy to install, reliable in operation** and comes with a full set of safety features. Its **RFID technology** makes it an excellent choice when the charger is used by a large number of people, allowing identification of authorized users before charging begins. **Only those with the right RFID card can use the charger**, preventing unauthorized use. With RFID, electric car chargers become more secure, efficient and user-friendly.

Solid Construction

The rugged ABS PC housing makes the BS30 ready for any challenge. No matter the weather, you can count on a reliable supply of power to your vehicle.

Resistance to Atmospheric Conditions

Our EV chargers are made to work in all weather conditions. From hot summer days to cold winter nights, the Extralink BS30 RFID will provide uninterrupted power to your electric vehicle.
