Full product description

Extralink switch cabinet

The **switch cabinet** is made of metal, which provides better protection against unauthorized access than plastic solutions. It is designed **for indoor use**, it is mounted on the wall.

The **cabinet is divided into two parts** - in the first one there are trays where you can put the splice covers, and in the second there is a commutation field where you can put **up to 12 SC simplex adapters**.

Cables are inserted through grommets located on the ceiling and on the floor of the cabinet. A total of **up to 4 tubes** can be inserted with fiber optic cables.
