Price: **898.99 zł** gross / 730.89 zł net

Manufacturer: EXTRALINK

Referention number: DNXGHHPQIRMMOI

Information:

The inflatable Black Forest SUP board 320 × 78 × 15 cm is a stable model for recreational paddling on lakes, calm rivers and coastal waters. The 78 cm width and 15 cm thickness provide more secure foot placement, good buoyancy of 300 l and a maximum load of up to 140 kg. The 3 mm EVA foam surface increases comfort and grip, while the removable large tail fin helps maintain direction. The reinforced double-layer construction improves rigidity and durability, and once deflated the board is easy to pack into a backpack. Included: board, ankle leash, fin and repair kit.

Full product description

Versatility and Expedition Readiness

The SUP-2015 board is the perfect companion for water expeditions, designed for a variety of bodies of water. Whether you're planning a leisurely lake cruise, river rafting, or exploring secluded sea bays, this board will work perfectly. What's more, you get a complete kit, including everything you need to immediately start your paddleboarding adventure. Its sturdy and well-thought-out construction guarantees that it will serve you reliably for many seasons to come.

Stability and Comfort for Every Skill Level

The design of the SUP-2015 board has been thought out for both first-time boarders and those with some experience. Its impressive width of 81 cm is the key to exceptional stability on the water. It will make even beginners feel confident, quickly catching their balance, which translates into increased comfort and enjoyment of swimming, allowing you to focus on admiring your surroundings rather than struggling to stay afloat.

Durable Construction for Many Seasons

Durability and resistance to damage are the features that distinguish the SUP-2015 board. It is made of selected durable materials, such as solid nylon, shock-absorbing EVA foam on the deck and reinforced PVC. This combination ensures not only optimal stiffness and lightness, but most importantly excellent resistance to abrasion, minor impacts or weathering, which is a guarantee of the board's long life even with regular use.
